# Revision History

Version	Description	Date
1.0	Initial release: All the box camera models are put into this manual; both hardware and software aspects are covered.	April 2012
1.1	New model added.	June 2012
1.2	New model added.	September 2012
1.3	New model added.	February 2013
1.4	New model added.	July 2013
1.5	New features added.	July 2013
1.6	UI Modified	Nov. 2013
1.7	Add new controller icons	Dec. 2013
1.8	New models added	Feb. 2014
1.9	New models added	May 2014
2.0	New models added	July 2014
2.1	New models added	Sept. 2014

# Safety Precautions

## Electric Shock Warning

This equipment may cause electric shocks if not handled properly.

- Access to this equipment should only be granted to trained operators and maintenance personnel who have been instructed of, and fully understand the possible hazardous conditions and the consequences of accessing non-field-serviceable units such as the power supplies.
- The system must be unplugged before moving, or that it becomes damaged.

## Reliable Grounding

Particular attention should be given to prepare reliable grounding for the power supply connection. It is suggested to use a direct connection to the branch circuit. Check for proper grounding before powering on the device.

## Overloading Protection

The device should be installed according to specifications. Provide a suitable power source with electrical overload protection. Do not overload the AC supply branch circuit that provides power to the device.

## ESD Precautions

Please observe all conventional anti-ESD methods while handling the device. The use of a grounded wrist strap and an anti-static work pad are recommended. Avoid dust and debris in your work area.

# Device Site Recommendations

The device should be installed according to specifications. This device should be operated at a site that is:

- Clean, dry, and free of excessive airborne particles.
- Well-ventilated and away from heat sources such as direct sunlight and radiators.
- Clear of vibration or physical shock.
- Away from strong electromagnetic fields produced by other devices.
- Available with properly grounded wall outlet for power. In regions where power sources are unstable, apply surge suppression.
- Available with sufficient space behind the device for cabling.

# Chapter 1. Product Overview

## 1.1. Network Camera Introduction

Box camera series are professional network cameras that use Internet Protocol (IP) to transmit video streams and control signals over networks. Capable of operating over both LANs and WANs, they provide a complete budget-conscious remote surveillance solution that are ultra clear and highly integrated. Box camera series combine a user-friendly interface and simplified installation with a powerful feature set to provide users an easy upgrade path to new digital surveillance system in a virtual environment. These highlights make box camera series ideal choices for environments that require remote surveillance or video transmission.

## 1.2. Features and Benefits

Box IP camera is a cutting-edge digital video transmission device. It can compress and transmit real-time images of outstanding quality using a reasonable amount of bandwidth through a standard TCP/IP network. The following features make this IP camera an outstanding choice when building an intelligent IP surveillance system:

- **High Video Quality**

High image quality is essential in security surveillance applications. It is important to be able to clearly capture an incident in progress and identify persons or objects involved. A network camera gives exceptional video quality, even greater than that of traditional analog cameras, which means that more detail or larger areas can be covered.

- **H.264/MPEG-4/MJPEG Compression**

Motion JPEG, MPEG-4, and H.264 (also known as MPEG-4 Part 10/AVC), each employ different techniques to reduce the amount of data transferred and stored in a network video system. Network cameras that support multiple compression standards are ideal for maximum flexibility and integration possibilities.

- **Dual Streaming**

Dual-stream design enables simultaneous support of real-time video monitoring, video recording, or mobile viewing applications which require different resolutions, compression formats and frame rates.

- **MicroSD/SDHC Card Slot**

IP surveillance relies on network connectivity, making it susceptible to attacks on the network between the camera and recording facilities. With onboard recording capability, our network cameras can truly be online 24/7. The microSD/SDHC card slot design ensures sufficient recording capacity for an over-weekend period even at full frame rate and high resolution.

- Tampering Detection

This is an intelligent video analytics application available only in selected network cameras in the market. When a camera is manipulated in any way (e.g. accidental redirection, blocking, defocusing, spray-painted, covered or damaged), it can automatically trigger recording and alert notifications.

- Power-over-Ethernet

The built-in Power-over-Ethernet support reduces cabling and installation costs, and enables users to consolidate power facilities for higher reliability. With PoE, a camera can still operate in the event of a power failure if it is connected to a centralized backup power with an Uninterruptible Power Supply.

Other detailed features include the following:

- Supports up to 10 simultaneous users.
- Built-in web server to allow real-time remote surveillance and control using standard web browsers.
- Built-in microSD card slot for local backup.
- Supports dynamic IP, LAN, and the Internet (ADSL, Cable modem).
- Supports most network protocols including: HTTP, TCP/IP, DNS, DHCP, RTSP, PPPoE.
- Supports 2-way audio.
- Automatically adapts image compression rate to available bandwidth.
- Supports image recording and still image capture.
- Provides Signal loss and motion-detection alerts (adjustable area and sensitivity level).
- Supports most PTZ camera protocols.
- Self-recovery feature automatically re-establishes broken network connections.

## 1.3. Technical Specifications

### Model List for Box Camera Series

CAM2311SC	2MP D/N Compact Network Camera
CAM2311	2MP H.264 D/N IP Camera with Individual ISP
CAM2331	Full HD Low Light D/N IP Camera
CAM2331P	2MP P-iris D/N IP Camera with Individual ISP
CAM2331SC	2MP Low Light D/N Network Camera
CAM2331SP	2MP P-iris Low Light D/N Network Camera
CAM2441	3MP HDR D/N IP Camera
CAM2441P	3MP HDR P-iris D/N IP Camera
CAM2511	5MP WDR D/N IP Camera
CAM2511SC	5MP WDR, ROI, PoE, Day/Night, Compact Network Camera

## Specifications for CAM2311

Model Name	<b>CAM2311</b>
Description	2M H.264 D/N IP Camera with Individual ISP
Image Sensor	1/2.7" 2 megapixel progressive scan CMOS
Lens	Changeable (CS/C mount)
SNR	48dB
WDR	Yes
Day/Night ICR	Yes
IR LED	N/A
Min Illumination	0.01 Lux @ F1.2 (B/W) 0.1 Lux @ F1.2 (Color)
Iris Control	DC drive
Viewing Angle	N/A
Camera Angle Adjustment	N/A
Pan/Tilt/Zoom Functionalities	N/A
Shutter Time	1/30~1/50,000 s
Video Compression	H.264/MPEG-4/MJPEG
Resolution	Up to 1920 x 1080
Video FPS	25 fps at 1080P (1920 x 1080) 30 fps at SXGA (1280 x 1024) 30 fps at HD720 (1280 x 720) 30 fps at D1 (720 x 480) 30 fps at VGA (640 x 480) 30 fps at QVGA (320 x 240)
Video Control	AGC (Auto Gain Control), AWB (Auto White Balance), AES (Auto Electronic Shutter), BLC (Back Light Compensation), HLC (High Light Compensation), 3D Noise Reduction, DEFOG, Image Adjustment
Video Stream	Dual stream at H.264, MPEG-4, and MJPEG simultaneously
Bit Rate	64K ~ 10Mbps, VBR, CBR, controller frame rate and quality
Intelligent Video	Motion Detection, Tampering Detection (blocked, redirected, defocused, or spray-painted)
Video Jack	Yes (BNC)
Audio	2 Way Audio
Audio Compression	32KHz, ADPCM
Audio Input/Output	3.5mm phone jack
Alarm In/Out	1/1, terminal block

Video Buffer	5 second pre-alarm, 30 second post-alarm
Event Action	Send snapshot or video clip by FTP or email, record to NAS, record to local storage, trigger DO
Supported Protocols	IPv4, ARP, TCP, UDP, ICMP, DHCP, NTP, DDNS, SMTP, FTP, HTTP, CIFS, PPPoE, UPnP, RTP, RTSP, RTCP, 3GPP, ONVIF
Ethernet	10/100 Base-T / RJ45
Local Storage	microSD/SDHC slot x 1 (Class2/Class 4/Class 6)
RS-485	1 (2 pins on terminal block)
USB	N/A
SDK	SDK 2.0
OS	Microsoft Windows XP/Vista/7
Browser	Microsoft IE 6.0 or above
Software	VMS 2.4.7
Temperature	Operation: -10~50°C (14~122°F) Storage: -30~60°C (-22~140°F)
Humidity	5 to 90%
Power	12VDC 1.5A : PoE (IEEE 802.3af) with Class 3
Power Consumption	Max. 7W without AUX Power
Dimension	74.95mm x 59.3mm x 153.5mm (2.95" x 2.34" x 6.04")
Weight	Net: 435g (0.96 lb) Gross: 1085g (2.4 lb)
Certification	Safety: LVD EMC: FCC, CE, GOST, KCC

## Specifications for CAM2311SC/2511SC

Model Name	CAM2311SC		CAM2511SC
Description	2M D/N Compact Network Camera with Individual ISP		5 Megapixel Day&Night Compact Network Camera
Image Sensor	1/2.8" 2 megapixel SONY Exmor CMOS		1/2.5" 5 megapixel progressive scan CMOS
Lens	Changeable (CS/C mount)		
SNR	48dB		
WDR	Yes		
Day/Night ICR	Yes		
IR LED	N/A		
Min Illumination	0.01 Lux @ F1.2 (B/W) 0.1 Lux @ F1.2 (Color)		
Iris Control	DC drive		
Viewing Angle	N/A		
Camera Angle Adjustment	N/A		
Pan/Tilt/Zoom Functionalities	N/A		
Shutter Time	1/1~1/1,000,000 s		
Video Compression	H.264/MPEG-4/MJPEG		
Resolution	Up to 1920 x 1080		Up to 2560 x 1920
Video FPS	30 fps at 1080P (1920 x 1080) 30 fps at SXGA (1280 x 1024) 30 fps at HD720 (1280 x 720) 30 fps at D1 (720 x 480) 30 fps at VGA (640 x 480) 30 fps at QVGA (320 x 240)		12 fps at QSXGA (2560 x 1920) 20 fps at QXGA (2048 x 1536) 30 fps at 1080P (1920 x 1080) 30 fps at SXGA (1280 x 1024) 30 fps at 720P (1280 x 720) 30 fps at D1 (720 x 480) 30 fps at VGA (640 x 480) 30 fps at QVGA (320 x 240)
Video Control	AGC (Auto Gain Control), AWB (Auto White Balance), AES (Auto Electronic Shutter), Luminance Control, WDR, 2D/3D De-noise, ROI, Edge Enhancement, Lens Correction, Image Adjustment		
Video Stream	Dual stream at H.264, MPEG-4, and MJPEG simultaneously		
Bit Rate	64K ~ 10Mbps, VBR, CBR, controller frame rate and quality		
Intelligent Video	Motion Detection, Tampering Detection (blocked, redirected, defocused, or spray-painted)		
Video Jack	N/A		
Audio	2 Way Audio		

Audio Compression	16KHz, ADPCM/G.711
Audio Input/Output	3.5mm phone jack
Alarm In/Out	1/1, terminal block
Video Buffer	5 second pre-alarm, 30 second post-alarm
Event Action	Send snapshot or video clip by FTP or email, record to NAS, record to local storage, trigger DO
Supported Protocols	IPv4, ARP, TCP, UDP, ICMP, DHCP, NTP, DDNS, SMTP, FTP, HTTP, CIFS, PPPoE, UPnP, RTP, RTSP, RTCP, 3GPP, ONVIF
Ethernet	10/100 Base-T / RJ45
Local Storage	microSD/SDHC slot x 1 (Class 4/Class 6)
RS-485	N/A
USB	N/A
SDK	SDK 2.0
OS	Microsoft Windows XP/Vista/7
Browser	Microsoft IE 6.0 or above
Software	VMS 2.6
Temperature	Operation: -10~50°C (14~122°F) Storage: -30~60°C (-22~140°F)
Humidity	5 to 90%
Power	PoE (IEEE 802.3af) with Class 3
Power Consumption	Max. 5W without AUX Power
Dimension	64mm x 60mm x 97mm (2.52" x 2.36" x 3.82")
Weight	Net: 275g Gross: 530g
Certification	Safety: LVD EMC: FCC, CE

## Specifications for CAM2331/2331P

Model Name	CAM2331	CAM2331P
Description	2M H.264 D/N IP Camera with Individual ISP	
Image Sensor	1/2.8" 2 megapixel SONY Exmor CMOS	
Lens	3.1-8mm P-Iris Lens, F1.2 (CS mount)	
SNR	48dB	
WDR	Yes	
Day/Night ICR	Yes	
IR LED	N/A	
Min Illumination	0.01 Lux @ F1.2 (B/W) 0.1 Lux @ F1.2 (Color)	
Iris Control	DC Drive	P-Iris
Viewing Angle	Diagonal: 123.1° - 48.3° Horizontal: 105.4° - 42.2° Vertical: 57.9° - 23.8°	
Camera Angle Adjustment	N/A	
Pan/Tilt/Zoom Functionalities	N/A	
Shutter Time	1/30-1/50,000 s	
Video Compression	H.264/MPEG-4/MJPEG	
Resolution	Up to 1920 x 1080	
Video FPS	25 fps at 1080P (1920 x 1080) 30 fps at SXGA (1280 x 1024) 30 fps at HD720 (1280 x 720) 30 fps at D1 (720 x 480) 30 fps at VGA (640 x 480) 30 fps at QVGA (320 x 240)	
Video Control	AGC (Auto Gain Control), AWB (Auto White Balance), AES (Auto Electronic Shutter), BLC (Back Light Compensation), HLC (High Light Compensation), 3D Noise Reduction, DEFOG, Image Adjustment

## Specifications for CAM2441/2441P

Model Name	CAM2441	CAM2441P
Description	3M HDR D/N IP Camera	
Image Sensor	1/3" 3 megapixel progressive scan CMOS	
Lens	Changeable (CS/C mount)	
SNR	48dB	
WDR	Yes (HDR, 110 dB)	
Day/Night ICR	Yes	
IR LED	N/A	
Min Illumination	0.01 Lux @ F1.2 (B/W) 0.1 Lux @ F1.2 (Color)	
Iris Control	DC drive	P-Iris
Viewing Angle	N/A	
Camera Angle Adjustment	N/A	
Pan/Tilt/Zoom Functionalities	N/A	
Shutter Time	1/2 ~ 1/1,000,000 s	
Video Compression	H.264/MPEG-4/MJPEG	
Resolution	Up to 2048 x 1536	
Video FPS	30 fps at QXGA (2048 x 1536) 60 fps at 1080P (1920 x 1080) 60 fps at SXGA (1280 x 1024) 60 fps at 720P (1280 x 720) 60 fps at D1 (720 x 480) 60 fps at VGA (640 x 480) 60 fps at QVGA (320 x 240)	
Video Control	AGC (Auto Gain Control), AWB (Auto White Balance), AES (Auto Electronic Shutter), 3D Noise Reduction, Image Adjustment	
Video Stream	Dual stream at H.264, MPEG-4, and MJPEG simultaneously	
Bit Rate	64K ~ 20Mbps, VBR, CBR, controller frame rate and quality	
Intelligent Video	Motion Detection, Tampering Detection (blocked, redirected, defocused, or spray-painted)	
Video Jack	Yes (BNC)	
Audio	2 Way Audio	
Audio Compression	16KHz, ADPCM/G.711	
Audio Input/Output	3.5mm phone jack	
Alarm In/Out	1/1, terminal block	
Video Buffer	5 second pre-alarm, 30 second post-alarm

RS-485	1 (2 pin on terminal block)
USB	N/A
SDK	SDK 2.0
OS	Microsoft Windows XP/Vista/7
Browser	Microsoft IE 6.0 or above
Software	VMS 2.4.8
Temperature	Operation: -10~50°C (14~122°F) Storage: -30~60°C (-22~140°F)
Humidity	5 to 90%
Power	12VDC 1.5A;PoE (IEEE 802.3af ) with Class 3
Power Consumption	Max. 7W
Dimension	74.95mm x 59.3mm x 153.5mm (2.95" x 2.34" x 6.04")
Weight	Net: 435g (0.96 lb) Gross: 1085g (2.4 lb)
Certification	Safety: LVD EMC: FCC, CE, GOST

## Specifications for CAM2511

Model Name	<b>CAM2511</b>
Description	5M WDR D/N IP Camera
Image Sensor	1/2.5" 5 megapixel progressive scan CMOS
Lens	Changeable (CS/C mount)
SNR	48dB
WDR	Yes
Day/Night ICR	Yes
IR LED	N/A
Min Illumination	0.01 Lux @ F1.2 (B/W) 0.1 Lux @ F1.2 (Color)
Iris Control	DC drive
Viewing Angle	N/A
Camera Angle Adjustment	N/A
Pan/Tilt/Zoom Functionalities	N/A
Shutter Time	1/2 ~ 1/100,000 s
Video Compression	H.264/MPEG-4/MJPEG
Resolution	Up to 2560 x 1920
Video FPS	14 fps at QSXGA (2560 x 1920) 21 fps at QXGA (2048 x 1536) 30 fps at 1080P (1920 x 1080) 30 fps at SXGA (1280 x 1024) 30 fps at 720P (1280 x 720) 30 fps at D1 (720 x 480) 30 fps at VGA (640 x 480) 30 fps at QVGA (320 x 240)
Video Control	AGC (Auto Gain Control), AWB (Auto White Balance), AES (Auto Electronic Shutter), Image Adjustment
Video Stream	Dual stream at H.264, MPEG-4, and MJPEG simultaneously
Bit Rate	64K ~ 10Mbps, VBR, CBR, controller frame rate and quality
Intelligent Video	Motion detection, Tampering Detection (blocked, redirected, defocused, or spray-painted)
Video Jack	Yes (BNC)
Audio	2 Way Audio
Audio Compression	32KHz, ADPCM
Audio Input/Output	3.5mm phone jack
Alarm In/Out	1/1, terminal block
Video Buffer	5 second pre-alarm, 30 second post-alarm

Event Action	Send snapshot or video clip by FTP or email, record to NAS, record to local storage, trigger DO
Supported Protocols	IPv4, ARP, TCP, UDP, ICMP, DHCP, NTP, DDNS, SMTP, FTP, HTTP, CIFS, PPPoE, UPnP, RTP, RTSP, RTCP, 3GPP, ONVIF
Ethernet	10/100 Base-T / RJ45
Local Storage	microSD/SDHC x 1 (Class2/Class 4/Class 6)
RS-485	1 (2 pin on terminal block)
USB	N/A
SDK	SDK 2.0
OS	Microsoft Windows XP/Vista/7
Browser	Microsoft IE 6.0 or above
Software	VMS 2.4.8
Temperature	Operation: -10~50°C (14~122°F) Storage: -30~60°C (-22~140°F)
Humidity	5 to 90%
Power	12VDC 1.5A;PoE (IEEE 802.3af ) with Class 3
Power Consumption	Max. 7W
Dimension	74.95mm x 59.3mm x 153.5mm (2.95" x 2.34" x 6.04")
Weight	Net: 435g (0.96 lb) Gross: 1085g (2.4 lb)
Certification	Safety: LVD EMC: FCC, CE, GOST

# Chapter 2. Hardware Overview

## 2.1. Overview

### Front View of CAM2xxx Series

### Front View of CAM2311SC/2511SC

1. Light Sensor

## Rear View of CAM2331P/2331SP

## Rear View of CAM2311SC/2511SC/2331SC

- |                        |                     |                          |                          |
|------------------------|---------------------|--------------------------|--------------------------|
| ① Audio In/Out         | ④ USB Connector     | ⑦ IR LED                 | ⑩ DC-Iris Connector      |
| ② Status LED Indicator | ⑤ Network Connector | ⑧ Light Sensor           | ⑪ MicroSD/SDHC Card Slot |
| ③ Reset Button         | ⑥ Power Connector   | ⑨ I/O Terminal Connector |                          |

## Rear View of CAM2311/2331/2441/2511

1. Audio In/Out Connector	2. Video Out Connector	3. Status LED Indicator
4. Reset Button	5. MicroSD/SDHC Card Slot	6. Network Connector
7. I/O Terminal Connector	8. Power Connector	9. DC-Iris Connector
9. P-Iris Connector	10. Power Indicator	

## 2.2. Dimensions

Unit: mm (inches)

## 2.3. Functions

#### 1. Audio In/Out Connector

Audio In/Out are both for 3.5mm jacks. Audio-in provides for an external mono microphone. Audio out can be connected to a public address system or an active speaker with a built-in amplifier. A pair of headphones can also be attached.

#### 2. Video Out Connector

#### 3. Light Sensor

The model with light sensor can detect the light level and determine when it requires a switch between Day Mode and Night Mode.

**Note:** Please refer to *Image Appearance Settings* Section for more details.

#### 4. Reset Button

Pressing the reset button will restore the camera to its factory default settings, as described in *Resetting to the Factory Default Settings*.

#### 5. MicroSD/SDHC Card Slot

The microSD/SDHC card slot can be used for local recording and firmware upgrade.

**Note:** Apacer 4GB Class 6/Transcend 8GB Class 6/Kingston 16GB Class 2, SanDisk 16GB Class 2/SanDisk 32GB Class 4 MicroSDHC card are recommended, since they have passed the SD Card QVL (Qualified Vender List) test.

#### 6. Network connector

The camera connects to the network via a standard RJ-45 network connector. The camera detects the speed of the local network (10/100BaseT). The camera also supports PoE (Power-over-Ethernet), and can be powered directly through the network cable.

#### 7. Power Connector

The power connector is provided for solutions without PoE.

#### 8. I/O Terminal Connector

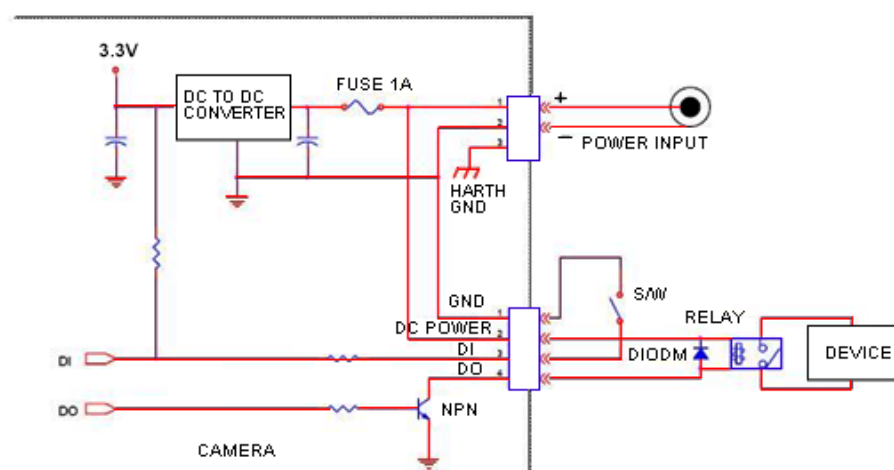

The I/O terminal connector provides an RS-485 interface, one transistor output, two digital inputs, and connection points for auxiliary DC power and GND.

The I/O terminal connector provides the interface to:

- 1 transistor output - For connecting external devices such as relays and LEDs. Devices can be activated by Output buttons on the Live View page or by an Event. The output will show as active (in Event Configuration > Port Status) if the alarm device is activated.
- 2 digital inputs - An alarm input for connecting devices that can toggle between an open and closed circuit, for use with devices such as PIRs, door/window contacts, glass break detectors, etc. When a signal is received the state changes and the input becomes active (shown under Event Configuration > Port Status).
- Auxiliary Power and GND

GND	Pin 1	Ground	Description
12V Auxiliary DC Power (not to power this camera)	Pin 2	Electrically connected in parallel with the connector for the power supply, this pin provides an auxiliary connector for main power to the unit. This pin can also be used to power auxiliary equipment with a maximum current of 100mA.	Voltage: 12V DC, Max: 1.2W
DI1(Digital Input)	Pin 3	Connect to GND to activate, or leave floating (or unconnected) to deactivate.	Must not be exposed to voltages greater than 30V DC

DI2 (Digital Input)	Pin 4	Connect to GND to activate, or leave floating (or unconnected) to deactivate.	Must not be exposed to voltages greater than 30V DC
DO(Digital Output)	Pin 5	Uses an open-collector NPN transistor with the emitter connected to the GND pin. If used with an external relay, a diode must be connected in parallel with the load, for protection against voltage transients.	Max load = <100mA Max voltage = 24V DC (to the transistor)
RS-485A	Pin 6	Data transmission connector for control of external devices. (ex. Pan/Tilt scanners)	Tx
RS-485B	Pin 7	Data transmission connector for control of external devices. (ex. Pan/Tilt scanners)	Tx

## 2.4. Installation

1. Remove the lens cover on the camera.

2. Connect the lens cable with the DC-Iris/P-Iris connector on the rear side.

3. Fasten the lens to the camera.

4. Make four screw holes on a flat surface with the electric drill.

5. Fasten the screws and anchor bolts to secure the camera stand to the surface.
6. Loosen the CS-ring to adjust the desired angle of the camera.
7. Retighten the ring after the desired angle is achieved.

**⚠ Warning**

Please confirm the camera stand length you need before joining it.

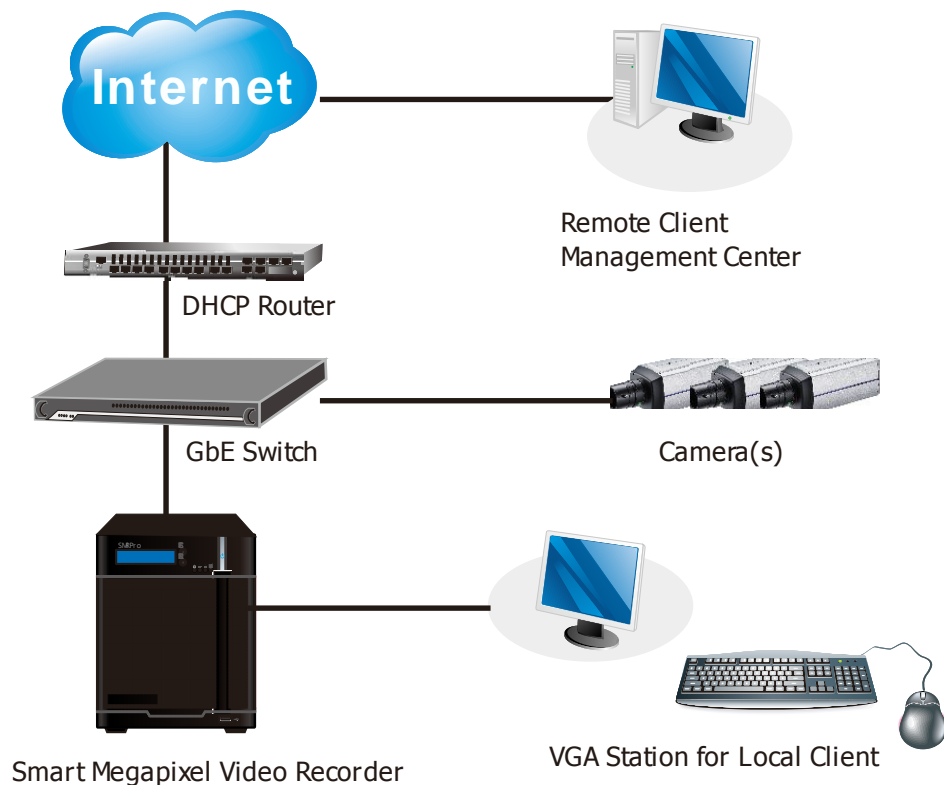

### CAM2311SC

8. Connect the power cord to the power port on the rear side.
9. Insert the LAN cable to the LAN port on the rear side.
10. The status LED indicator will blink amber to indicate the boot-up sequence has started. Wait until the LED is in a steady green state, indicating the camera boot-up is complete.

## 2.5. Camera Deployment

## 2.6. Before You Start

Please prepare a PC with Windows (XP or above) and web browsers (Internet Explorer 6.0 or above) installed.

# Chapter 3. Connecting to the Network Camera

This section demonstrates how to connect to the network camera through two methods:

- Web Browser - A simple web-based interface. Internet Explorer is the recommended web browser for use with network cameras, and our examples will be from this browser. Usage on other browsers will be similar.
- RTSP Player - These include common streaming media players, such as *RealPlayer* or *Quicktime Player*. These players can provide live view of the camera using the Real-Time Streaming Protocol (RTSP).

## 3.1. Connecting with a Web Browser

### Obtaining IP address through the IP Utility

The IP address can be obtained using the IP Utility in your product CD:

1. Double click Start SearchToolInstall.exe to begin the utility installation.
2. After the installation is complete, click the **Auto Search** button or click **Camera > Search** in the menus.

The camera search will begin, and a status bar will display the search progress.

3. The details of the camera will display after the search is finished.

Details							
	Number	Name	IP	Model	MAC	Status	NetMask
<input type="checkbox"/>	1	CAM2320	172.18.6.147	CAM2320	00D02360022F	New	255.255.254.0
<input type="checkbox"/>	2	CAM2311	172.18.7.61	CAM2311	000C0CA006AA	New	255.255.254.0
<input type="checkbox"/>	3	CAM3365	172.18.6.80	CAM3365	00D02360022C	New	255.255.254.0
<input type="checkbox"/>	4	CAM1300	172.18.6.215	CAM1300	000C0CA006F1	New	255.255.254.0

**Note:** (1) The search may take up to 2 minutes, depending on your network configuration. (2) If your network does not have DHCP service, the default IP address is 192.168.88.10.

### Connecting to the Network Camera

Launch the web browser (Microsoft ® Internet Explorer 6.0 or higher is recommended). Enter the IP address of the network camera in the address bar of your browser and press enter.

You can also Click the **Link to Camera** button or click **Camera> Link to Camera** in the IP Utility menu bar. The camera's live view webpage will open in a browser window.

## Logging into the System

The following information will prompt for logging in:

- **Username** - The username for the domain. **Default is always *admin*.**
- **Password** - The password for the domain. **Default is always *admin*.**

Click **OK**.

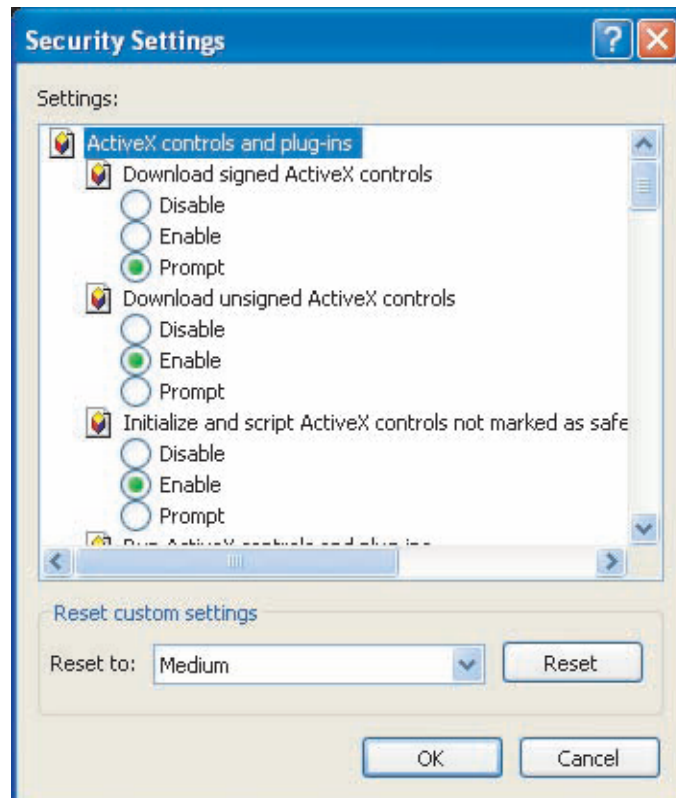

## Installing Active X Components in Internet Explorer

You may be prompted to install ActiveX® components when accessing the network camera's Live View page; click **Yes** when prompted. You will be able to access the camera after installation is completed. Under Windows, this action may require administrator privileges.

If the dialog box suggests that you are not allowed to install ActiveX components, try resolving the problem using the following steps:

1. In Internet Explorer, open Tools> Internet Options> Security. Click the Custom level button.

2. Search for *Download signed ActiveX controls*. Under this heading select **Prompt** and then click **OK**.

3. Continue installing the Active X components.
4. After installing ActiveX, go to **Tools > Internet Options > Trusted Websites > Sites** and add the IP Address of the camera.

## Logging Out of the System

Logging off of the camera can be performed by closing the browser window.

Users can also choose to click the **Logout** link located at the top of the screen.

## Using the Help Interface

While using the web interface, you may click on the **Help** link located under the title bar. This will bring up a pop-up containing the IP Camera Help manual.

## 3.2. Connecting with an RTSP Player

Connections through RTSP Media Players such as *Real Player* and *QuickTime Player* are supported. We will use Real Player as an example in this section.

1. Launch Real Player.
1. Select **File > Open URL**, to open a URL dialog box.
2. Enter the camera URL in the address bar.

**Note:** The format for RTSP is: `rtsp://<IP Address>/<Access>`, where `<Access>` can be found at **Settings > Network > Port Settings > RTSP Setting**. By default the `<Access>` value should be `stream1` and `stream2`.

3. Click **OK**, the stream should begin playing.

## Connecting with a Mobile Device RTSP Player

In order to access streaming video on 3GPP mobile devices, please make sure the network camera is already online and connected to the Internet. In the **IP** field under the *IP Address* section of the window, enter the IP address of the IP camera.

1. Change the settings under **Settings > Video & Audio > Stream2**: Set the image format as MJPEG4, resolution as QVGA (320x240 or below, and constant bit rate as 128 Mbps or below.
2. Launch the RTSP Player on the 3GPP mobile device and enter the URL address for the camera. The video should start playing.

**Note:** The format for RTSP is: `rtsp://<IP Address>/<Access>`, where `<Access>` can be found at **Settings > Network > Port Settings > RTSP Setting**. By default the `<Access>` value should be `stream1` and `stream2`.

# Chapter 4. Configuration through the Web Interface

Camera configurations can be done through web interface and IP Utility.

\*\*For web interface, please look into [this chapter](#); for IP Utility, please refer to [Chapter 5](#).

		Web Interface	IP Utility
General	Basic Settings	V	X
	User Account	V	X
	Date & Time	V	X
Network	Network Configuration	V	Set IP Only
	Port Settings	V	X
	UpnP	V	X
	Wifi Setting (CAM1300/1311 Only)	V	X
Video & Audio Settings	Basic Settings	V	X
	Image Appearance Settings	V	X
	Video Streams	V	X
	Audio Settings	V	X

Focus Tool		X	V

## 4.1. Interface Layout

This section demonstrates the layout of the network camera's main interface.

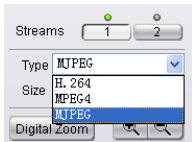

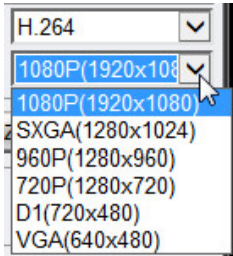

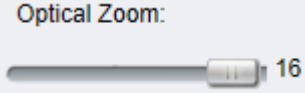

The 4 main areas on the interface are:

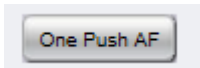

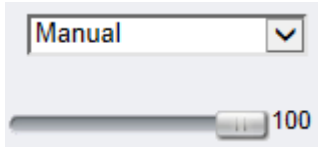

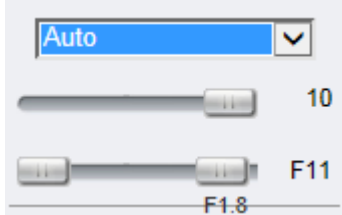

1. **Menu Bar** - The links on this bar allow users to toggle between live-view and settings screens, as well as logout and pull up the help menu.
2. **Live View Controls** - These controls allow users to configure the live view streams and camera live view functionality.
3. **Button Bar** - These controls allow the user to quickly access common features such as live view window resizing, video and still frame capture, interface language, and audio controls.
4. **Live View Window** - This portion of the screen displays the stream selected in the **Live View Control** section of the web interface.

## Control Descriptions

Control	Description
	<b>Adjust Window Size:</b> When clicked, the display window size can be adjusted manually to fit the screen. The screen size changes back to the actual image size (resolution).
	<b>Full-Screen:</b> Goes to full-screen when clicked; press “ESC” to return to windowed view.
	<b>Image Capture:</b> When clicked, captures the current screen as an image in a new pop-up window. The location for saving the image can be changed under <a href="#">Settings &gt; Recording&gt; Recording Basic Settings</a> . The file name is set to “Camera Name”+yyyymmdd_hhmmss (the Camera Name can be changed under <a href="#">Settings &gt; General&gt; Basic Settings</a> ).
	<b>Manual Record:</b> When clicked, records the current live video. Stops recording when clicked again. The location for storing the video can be changed under <a href="#">Settings &gt; Recording &gt; Recording Basic Settings</a> .
	<b>Playback:</b> When clicked, playbacks the recordings according to the settings under <a href="#">Settings &gt; Recording &gt; Recording Basic Settings</a> .
	<b>Audio-In:</b> Turned off by default; clicking once allows audio to be transmitted from a local microphone to the camera. Clicking again stops audio transmission. Multiple users may access the live view page and receive audio from the camera, but only one user at once is allowed to send audio to the camera.
	<b>Mute:</b> Mutes the audio captured by the camera when clicked, un-mutes the audio when clicked again.
	<b>Volume:</b> Sets to the current computer volume; Dragging the slider adjusts the volume.

Control	Description
	<b>Language:</b> Sets the UI language. Available languages include English, Simplified Chinese, and Traditional Chinese.
	<b>Streams:</b> Allows users to choose which camera stream to view. The indicator above the stream will turn light green when the stream is selected.
	<b>Video Format:</b> Sets the compression format for the current stream. Available formats are H.264, MPEG4, and MJPEG.
	<b>Image size (resolution):</b> Sets the resolution of the stream currently selected. Options are available for each stream: 1536P (2048 x 1536), 1080P (1920 x 1080), SXGA (1280 x 1024), 720P (1280 x 720), VGA (640 x 480), QVGA (320 x 240) for stream 1 and VGA (640 x 480), QVGA (320 x 240), QQVGA (160 x 120) for stream 2.
	<b>Digital Zoom:</b> When clicked, activates digital zoom in the current live-view stream. 2 options are available when clicked: <div style="display: flex; flex-direction: column; align-items: flex-start;"> <div>  Zoom In </div> <div>  Zoom Out </div> </div>
	To set the digital output as high voltage or ground or off can be done here. <div style="display: flex; align-items: center; margin-top: 10px;"> <div style="border: 1px solid gray; padding: 2px 5px; margin-right: 5px;">High</div> <div style="border: 1px solid gray; padding: 2px 5px; margin-right: 5px;">Low</div> <div style="border: 1px solid gray; padding: 2px 5px;">Off</div> </div>
	To magnify the image, change its focal length to vary its view from 0 to 16.
	Change the depth of field by adjusting the Near and Far steps.

Control	Description
	AutoFocus can be achieved by pressing this button.
	<p>P-IRIS level can be adjusted Manually or Automatically.</p>  

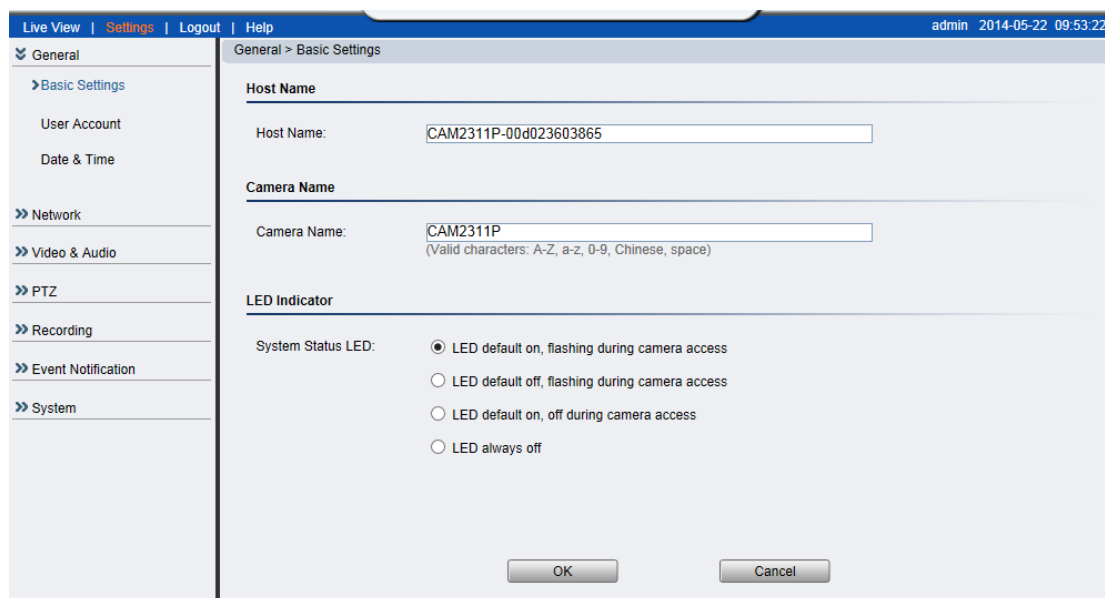

## 4.2. Settings

Camera settings may be changed by clicking on the **Settings** link located in the title bar. This will bring up a menu list of configuration menus for all major camera settings.

### General

General setting menus are found under **Settings > General**.

#### Basic Settings

The screenshot shows a web interface for camera settings. At the top, there is a navigation bar with links: Live View, Settings (highlighted), Logout, and Help. The user is logged in as 'admin' on '2014-05-22 09:53:22'. On the left, a sidebar menu shows 'General' expanded with sub-items: Basic Settings (selected), User Account, and Date & Time. Below these are other categories: Network, Video & Audio, PTZ, Recording, Event Notification, and System. The main content area is titled 'General > Basic Settings'. It contains three sections: 'Host Name' with a text input field containing 'CAM2311P-00d023603865'; 'Camera Name' with a text input field containing 'CAM2311P' and a note '(Valid characters: A-Z, a-z, 0-9, Chinese, space)'; and 'LED Indicator' with four radio button options: 'LED default on, flashing during camera access' (selected), 'LED default off, flashing during camera access', 'LED default on, off during camera access', and 'LED always off'. At the bottom right are 'OK' and 'Cancel' buttons.

Basic settings may be accessed under **General > Basic Settings**. The following settings can be made:

- **Host Name:** by default set to "model name + MAC address"; displays on the center of the main page. Users may replace the default name with a new name consisting of alphanumeric characters, spaces and the ":" character.
- **Camera Name:** by default set to "model name"; after selecting "Camera Name" from **Settings > Video & Audio > Basic Settings**, the Camera Name will show on the display. Users may replace the default name with a new name consisting of alphanumeric characters, spaces and the ":" character.
- **System Status LED:** changes the behavior of the status LED on the front of the camera. There are four possible behaviors:

- **LED on when camera is on** - LED default on, flashing during camera access.
- **LED on during camera access** - LED default off, flashing during camera access
- **LED off during camera access** - LED default on, off during camera access
- **LED always off** - LED always off

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## User Account

The User Account section, found under **General > User Account**, controls the user account information and privileges.

The screenshot shows a web interface for managing user accounts. The top navigation bar includes 'Live View', 'Settings' (highlighted), 'Logout', and 'Help'. The user is logged in as 'admin' on '2014-05-22' at '10:28:10'. The left sidebar shows a tree view with 'General' selected, containing 'Basic Settings', 'User Account' (highlighted), 'Date & Time', 'Network', 'Video & Audio', 'PTZ', 'Recording', 'Event Notification', and 'System'. The main content area is titled 'General > User Account' and contains a 'User Account' section with a table of existing accounts. Below the table are 'Add', 'Edit', and 'Remove' buttons. The 'User Login Settings' section includes a checkbox for 'Enable access without login' (checked) and a text input for 'Maximum number of simultaneous viewers limited to' with the value '5' and a range '[1..10]'. 'OK' and 'Cancel' buttons are at the bottom.

User Name	User Group
admin	Administrator
guest	Operator

Max account number is 10.

Buttons: Add, Edit, Remove

**User Login Settings**

☒ Enable access without login

Maximum number of simultaneous viewers limited to:  [1..10]

Buttons: OK, Cancel

There are two pre-configured accounts:

- **admin** - This is the default administration account, and cannot be deleted.
- **guest** - This is an account with only live view capability.

There are also two basic settings under user account settings:

- **Enable access without login** - Checking the checkbox will allow users to view the camera stream without having to login.
- **Maximum number of simultaneous viewers limited to** - Enter a number from 1 to 10 in this field to limit the number of users that can view the live view stream for this camera. This option will only be displayed once you add an account.

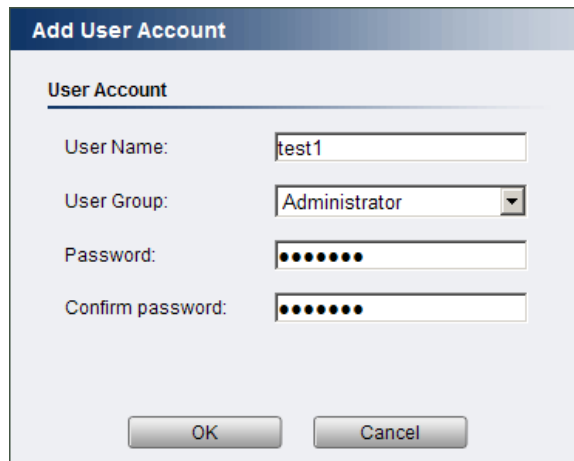

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## Adding Accounts

In **General > User Account** under the **User Account** heading, click on “Add”.

Up to 10 accounts can be added to the system.

A screenshot of a software dialog box titled "Add User Account". The dialog has a light blue header bar with the title. Below the header, there is a sub-header "User Account". The main area contains four input fields: "User Name:" with the text "test1", "User Group:" with a dropdown menu showing "Administrator", "Password:" with a masked field of dots, and "Confirm password:" with a masked field of dots. At the bottom, there are two buttons: "OK" and "Cancel".

All User Names and Passwords must be combinations of alphanumeric characters, “:”, “-“, “\_” between 4 and 20 characters in length, and must begin with an alphabet letter. Fill out the following fields:

- **User Name** - The identifier name used to login to the system.
- **User Group** - The system allows for 2 types of users.
  - **Administrator** - Administrators have full access privileges.
  - **Operator** - Operators can only access the live view page.
- **Password** - A passkey used to control user access. The password must be a combination of alphanumeric characters, “:”, “-“, “\_” between 4 and 20 characters in length, and must begin with an alphabet letter. This password should be retyped in the **Confirm password** field, to ensure that the correct key is saved.

Click **OK** when finished to add the user to the system.

## Editing Accounts

In **General > User Account** under the **User Account** heading, select an existing account by clicking on the account entry. The entry will be highlighted in yellow. Clicking **Edit** will allow you to change the following fields:

- **User Group** - The system allows for 2 types of users.
  - **Administrator** - Administrators have full access privileges.
  - **Operator** - Operators can only access the live view page.
- **Password** - A passkey used to control user access. The password must be a combination of alphanumeric characters, “:”, “-”, “\_” between 4 and 20 characters in length, and must begin with an alphabet letter. This password should be retyped in the **Confirm password** field, to ensure that the correct key is saved.

Click **OK** when finished to save any changes.

**Note:** Only accounts that are not currently logged-in can be edited.

## Deleting Accounts

In **General > User Account** under the **User Account** heading, select an existing account by clicking on the account entry. The entry will be highlighted in yellow. Click **Remove** and, when prompted to confirm deletion, click **OK** to remove the account.

## Date & Time

Date and time settings can be accessed at **General > Date & Time**.

The screenshot displays the 'General > Date & Time' configuration page. On the left is a sidebar with navigation links: General (selected), Basic Settings, User Account, Date & Time, Network, Video & Audio, PTZ, Recording, Event Notification, and System. The main content area is titled 'General > Date & Time' and contains three sections: 'Current Date & Time' showing 'Date: 2014-07-21' and 'Time: 14:49:16'; 'Time Zone Settings' with a dropdown menu set to '(GMT +8:00) Beijing, Perth, Singapore, Hong Kong, Taipei'; and 'Time Settings' with three radio button options: 'Synchronize with NTP server' (selected), 'Manual Update', and 'Synchronize with Computer Time'. The 'Synchronize with NTP server' option includes an 'NTP server' field with the value '64.236.96.53'. The 'Manual Update' option has 'Date' and 'Time' input fields. The 'Synchronize with Computer Time' option shows the system's current date and time. At the bottom is a 'Day Light Saving' section with an 'Enable Day Light Saving' checkbox and 'Start Time'/'End Time' fields using month, day, hour, and minute dropdowns. 'OK' and 'Cancel' buttons are at the bottom right.

*Current Date & Time* displays the current system date and time.

### Time Zone Settings

The time zone can be set using the dropdown menu. This menu is only applicable when selectable when **Synchronize with NTP Server** is chosen under **Time Settings**.

### Time Settings

There are 3 ways to set the system time:

- **Synchronize with NTP server** - NTP is a protocol for synchronizing the system clock to an external server. If this option is chosen, enter the IP address of a known NTP server in the **NTP Server** field. You must also choose the appropriate time zone under **Time Zone Settings**.
- **Manual update** - Updates the time manually. Choose the appropriate date and enter a time for the system.
- **Synchronize with computer time** - Synchronizes the time with the computer's internal clock.

### Day Light Saving

Users can set the Day Light Saving Time by ticking on **Enable Day Light Saving**.

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## Network

The network settings, including network configuration, port configuration, and universal plug and play (UPnP) settings are used to configure camera connectivity. These settings are found under the **Settings > Network** context.

The screenshot displays the 'Network > Network Configuration' page of a web interface. The top navigation bar includes 'Live View', 'Settings' (highlighted), 'Logout', and 'Help'. The user is logged in as 'admin' on '2014-05-13 14:36:20'. The left sidebar shows a tree view with 'General', 'Network' (expanded), and 'Video & Audio'. Under 'Network', 'Network Configuration' is selected, with sub-items 'Port Settings', 'UPnP', 'Wifi', 'SNMP', and 'HTTPS'. The main content area is divided into four sections: 'IP & DNS Settings', 'IPv6 & DNS Setting', 'PPPoE Settings', and 'DDNS Settings'. Each section contains various configuration options and input fields. At the bottom, there are 'OK' and 'Cancel' buttons.

Password:

## Network Configuration

These settings are used to configure basic network access for the camera. They are found under **Network > Network Configuration**.

Most of these settings vary with your specific hardware setup; therefore the defaults are set for common SOHO level usage. If you are using the camera in an enterprise environment, please check with your IT department to determine the correct settings for this section.

## IP & DNS Settings

These settings are used to determine the IP address of the network camera.

- **Get IP address automatically** - Automatically acquires IP address from a DHCP service. This is the default setting.
- **Use fixed IP address** - Sets a fixed IP address. You must also manually fill in IP address, Subnet mask, Default gateway, Primary DNS, and Secondary DNS fields. The network camera can be connected to the network upon completion.

## IPv6 & DNS Settings

This only works if your network environment and hardware equipment support IPv6.

- **Get IPv6 address automatically** - the network camera will listen to router advertisements and be assigned with a link-local IPv6 address accordingly.
- **Use fixed IPv6 address** - Sets a fixed IPv6 address. You must also manually fill in IP address, Prefix length, Default gateway, Primary DNS, and Secondary DNS fields. The network camera can be connected to the network upon completion.

## PPPoE Settings

This feature is disabled by default. Connecting to the network using PPPoE (Point-to-Point Protocol over Ethernet) requires a user name and password from your ISP (Internet Service Provider). Select **Enable PPPoE** and fill in valid user name and password to connect the camera to the Internet.

## DDNS Settings

DDNS (Dynamic Domain Name Server) is a protocol that enables the camera to maintain a static connection address, even when its IP changes. Access using this feature is disabled by default.

Connecting using DDNS requires registration on third-party websites for DDNS services. Select desired DDNS service website, check the **Enable DDNS** option, and fill in valid user name and password. You can then access the camera through the registered domain name.

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## Port Settings

Ports are a software construct used to multiplex the transmission information to and from the camera. They act as separate endpoints within an IP address where software "listens" for incoming information. This section, which can be accessed under **Network > Port Settings**, includes *HTTP Port Settings*, *RTSP Settings* and *RTP Multicast Settings*.

Network > Port Settings

**HTTP Port Settings**

HTTP Port:

LiveView Port:  (1-32767)

**RTSP Settings**

Access Name for Stream 1:  eq. rtsp://IP address/stream1

Access Name for Stream 2:  eq. rtsp://IP address/stream2

RTSP port:  Note: RTSP port must be a valid port number.

RTP port for video:  Note: RTP port for video must be a valid port number.

RTCP port for video:  Note: RTCP port for video must be a valid port number.

RTP port for audio:  Note: RTP port for audio must be a valid port number.

RTCP port for audio:  Note: RTCP port for audio must be a valid port number.

Rtp Packet Size:  (1448-16384)

**RTP Multicast Settings**

☐ Enable RTP Multicast

RTP Multicast Video Port1:

RTP Multicast Audio Port1:

RTP Multicast Video Port2:

RTP Multicast Group Address:

RTP Multicast TTL:

OK Cancel

**Note:** The default port numbers in this section are, for the most part, well-known or commonly known values. We recommend that they not be changed unless there is a specific reason to do so.

## HTTP Port Settings

The **HTTP port** number is used access the camera via the HTTP protocol.

The **LiveView Port** number is used to transmit live-view information.

## RTSP Settings

Real-Time Streaming Protocol (RTSP) is a protocol used to establish and control media sessions between end points.

You may change the access name for stream 1, stream 2, the RTSP port number, the RTP port for video, the RTCP port for video, RTP port for audio, and RTCP port for audio.

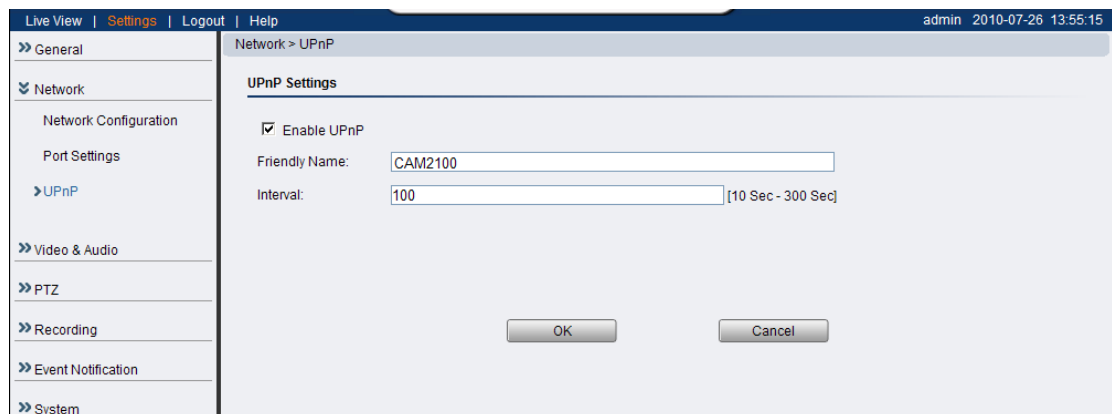

**Note:** The RTP port number must be an even number. After entering the RTP port number, the RTCP port number will automatically be set to the RTP port number + 1.

## RTP Multicast Settings

Tick **Enable RTP Multicast** to set up multicast via the RTP protocol. The **RTP Multicast video/audio port and group address** can also be set.

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## UpnP

The screenshot shows a web interface for configuring a camera. The top navigation bar includes 'Live View', 'Settings' (highlighted), 'Logout', and 'Help'. The user is logged in as 'admin' on '2010-07-26 13:55:15'. The left sidebar shows a tree view with 'General', 'Network' (selected), 'Video & Audio', 'PTZ', 'Recording', 'Event Notification', and 'System'. Under 'Network', 'UPnP' is selected. The main content area is titled 'Network > UPnP' and contains the 'UPnP Settings' section. It has a checkbox 'Enable UPnP' which is checked. Below it, 'Friendly Name' is set to 'CAM2100' and 'Interval' is set to '100' (with a range of '[10 Sec - 300 Sec]'). At the bottom are 'OK' and 'Cancel' buttons.

Universal plug and play (UPnP) is a protocol that simplifies the implementation of networks by allowing new hardware to connect seamlessly to a network. The settings for this feature can be found under **Network>UPnP**.

To enable UPnP, first check the **Enable UPnP** box. If you wish to change the default values, there are two fields that can be edited.

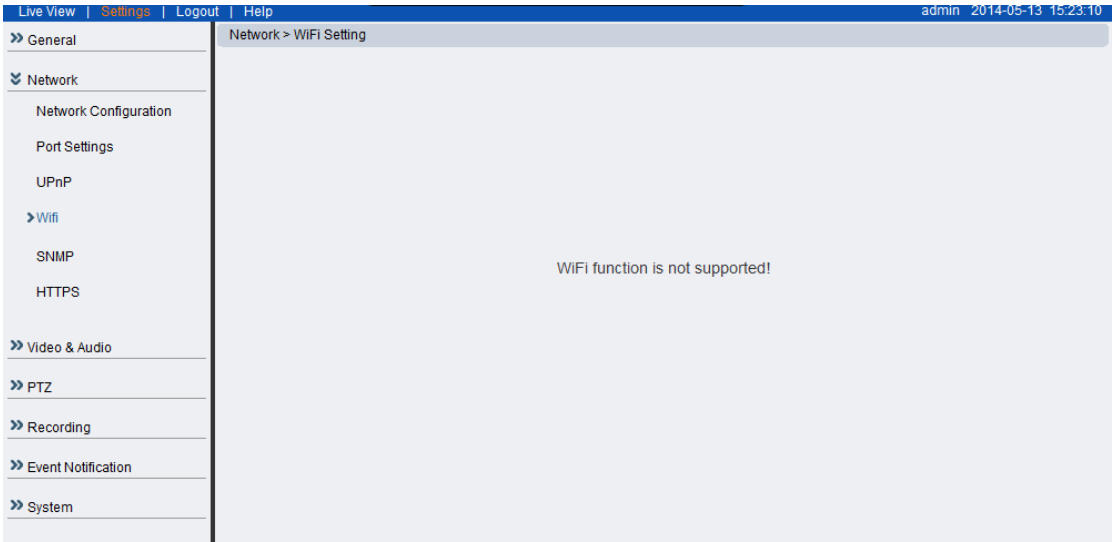

- **Friendly Name** - An identifier for the camera on the network.
- **Interval** - The time between camera-sent UPnP updates.

Click **OK** to activate UPnP or **Cancel** to abort the changes before you leave the page. Once activated, the camera will be visible to other devices on the network.

**Note:** If the computer does not have UPnP installed, you can add it by going to **Start > Control Panel > Add or Remove Programs**. In the Add or Remove Programs page, select **Add/Remove Windows Components > Networking Services** and click **Details**. Select **UPnP** from the popup window, and **OK** out to install **UPnP** services.

# Wifi

Wifi functionality is not supported for CAM2xxx series.

## SNMP

The screenshot shows a web-based configuration interface for a network device. The top navigation bar includes links for 'Live View', 'Settings', 'Logout', and 'Help', along with the user 'admin' and the timestamp '2014-05-13 15:24:32'. A left sidebar contains a tree view with categories like 'General', 'Network', 'Video & Audio', 'PTZ', 'Recording', 'Event Notification', and 'System'. The 'Network' category is expanded, showing sub-items: 'Network Configuration', 'Port Settings', 'UPnP', 'Wifi', 'SNMP' (highlighted), and 'HTTPS'. The main content area is titled 'Network > Network Configuration' and displays the 'SNMP Config' form. This form has two sections: 'Enable SNMPv1, SNMPv2c' and 'Enable SNMPv3'. The first section includes fields for 'Read/Write community' and 'Read only community'. The second section includes fields for 'Read/Write Security Name', 'Authentication Type' (set to MD5), 'Authentication Password', 'Encryption Type' (set to AES), 'Encryption Password', 'Read Only Security Name', 'Authentication Type' (set to SHA), 'Authentication Password', 'Encryption Type' (set to DES), and 'Encryption Password'. 'OK' and 'Cancel' buttons are at the bottom right.

The Simple Network Management Protocol is an application layer protocol that facilitates the exchange of management information between network devices. It helps network administrators to remotely manage network devices and find, solve network problems with ease. The settings for this feature can be found under **Network > SNMP**.

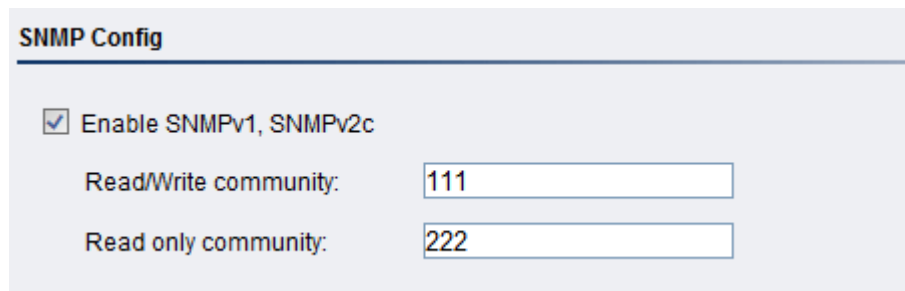

■ The SNMP consists of the following three key components:

1. Manager: Network-management station (NMS), a server which executes applications that monitor and control managed devices.
2. Agent: A network-management software module on a managed device which transfers the status of managed devices to the NMS.
3. Managed device: A network node on a managed network. For example: routers, switches, bridges, hubs, computer hosts, printers, IP telephones, network cameras, web server, and database.

Before configuring SNMP settings on the this page, please enable your NMS first.

To enable SNMP, check the **Enable SNMPv1, SNMPv2c** box.

Select this option and enter the names of Read/Write community and Read Only community according to your NMS settings. For example: 111/222.

A screenshot of a web-based configuration window titled "SNMP Config". The window has a light gray background and a thin blue border. At the top, the title "SNMP Config" is displayed in a bold, dark blue font. Below the title, there is a checkbox labeled "Enable SNMPv1, SNMPv2c" which is checked. Underneath the checkbox, there are two text input fields. The first field is labeled "Read/Write community:" and contains the text "111". The second field is labeled "Read only community:" and contains the text "222".

**SNMP Config**

☒ Enable SNMPv1, SNMPv2c

Read/Write community:

Read only community:

check the **Enable SnMPv3**

This option contains cryptographic security, a higher security level, which allows you to set the Authentication password and the Encryption password.

■ **Security name:** According to your NMS settings, choose Read/Write or Read Only and enter the community name.

■ **Authentication type:** Select MD5 or SHA as the authentication method.

■ **Authentication password:** Enter the password for authentication (at least 8 characters).

■ **Encryption password:** Enter a password for encryption (at least 8 characters).

Click **OK** to activate SNMP or **Cancel** to abort the changes before you leave the page. Once activated, the camera will be visible to other devices on the network.

## HTTPS

The screenshot shows a web interface for network configuration. The left sidebar has a menu with 'General', 'Network', 'Video & Audio', 'PTZ', 'Recording', 'Event Notification', and 'System'. The 'Network' section is expanded, showing 'Network Configuration', 'Port Settings', 'UPnP', 'Wifi', and 'SNMP'. The 'HTTPS' link is highlighted. The main content area is titled 'Network > Network Configuration' and contains the 'Installed Certificate' section. It has two radio buttons: 'Create Self-Signed Certificate Automatically' (selected) and 'Create Self-Signed Certificate Manually'. A 'Create' button is to the right. Below is the 'Certificate Info' section, which is currently empty, showing fields for 'Subject Name' and 'State'. A 'Remove' button is at the bottom right.

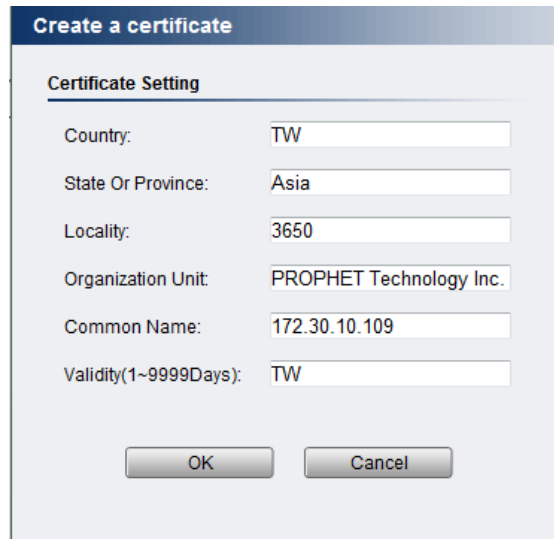

Hypertext Transfer Protocol Secure (HTTPS) is a communications protocol for secure communication over a computer network, with especially wide deployment on the internet.

Select **Create Self-Signed Certificate Automatically** and click “**Create**” to have the certification authority automatically. Once succeed, you will see the **Certificate Info** in the next section of this web page.

This screenshot is similar to the previous one, but the 'Certificate Info' section is now populated with data. A red rectangular box highlights this section. The 'Subject Name' field contains the text 'C=TW,ST=Asia,L=Asia,O=PROPHET Technology Inc.,OU=PROPHET Technology Inc. CN=ipcam@surveon.com,V=3650'. The 'State' field contains the text 'active'. The 'Create' button is still present, and the 'Remove' button is at the bottom right.

Click “**Remove**” to delete the set certificate if you wish to change the setting.

Or **Select Self-Signed Certificate Manually** and click **“Create”** to have the certification authority manually. A window will be prompted for creating certificate information.

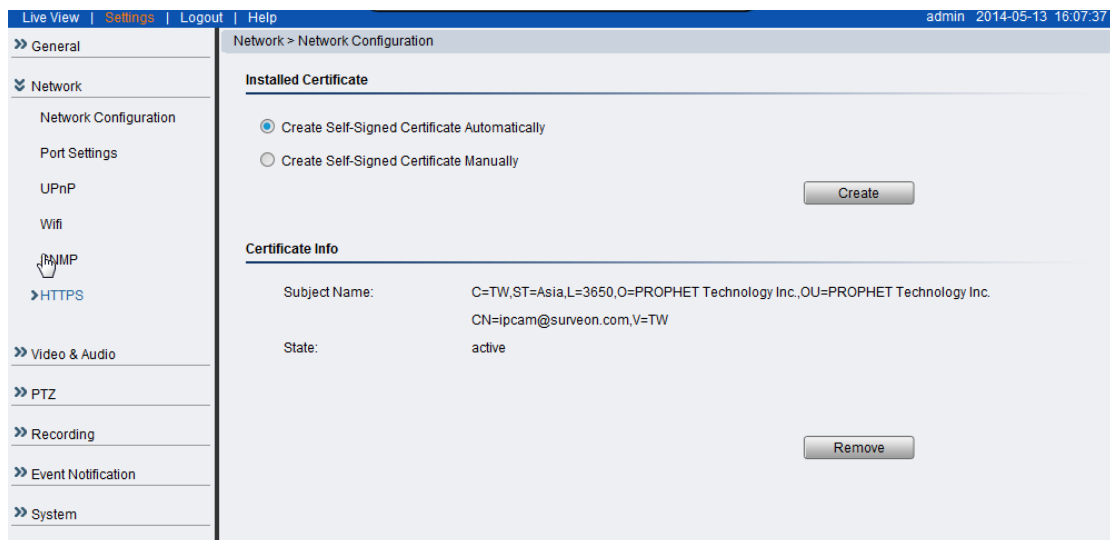

The dialog box titled "Create a certificate" contains a "Certificate Setting" section with the following fields:

Field	Value
Country:	TW
State Or Province:	Asia
Locality:	3650
Organization Unit:	PROPHET Technology Inc.
Common Name:	172.30.10.109
Validity(1~9999Days):	TW

At the bottom of the dialog are two buttons: "OK" and "Cancel".

Edit the information in the files if necessary and click **“OK”** to confirm the setting. Once succeed, you will see the **Certificate Info** in the next section of this web page.

The screenshot shows the "Network > Network Configuration" page. The left sidebar has a menu with "General", "Network", "Network Configuration", "Port Settings", "UPnP", "Wifi", "NMP", "HTTPS", "Video & Audio", "PTZ", "Recording", "Event Notification", and "System". The "NMP" item is selected.

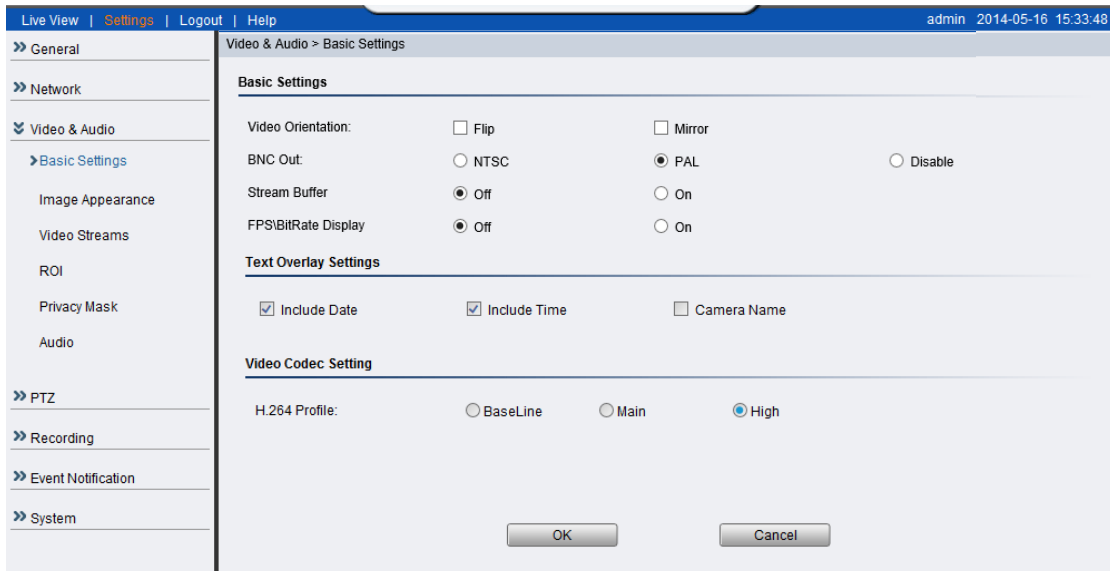

The main content area is titled "Network > Network Configuration" and contains two sections:

- Installed Certificate**: Contains two radio buttons: "Create Self-Signed Certificate Automatically" (selected) and "Create Self-Signed Certificate Manually". A "Create" button is located to the right of the second option.
- Certificate Info**: Displays the following information:
  - Subject Name: C=TW,ST=Asia,L=3650,O=PROPHET Technology Inc.,OU=PROPHET Technology Inc. CN=ipcam@surveon.com,V=TW
  - State: activeA "Remove" button is located at the bottom right of this section.

Click **“Remove”** to delete the set certificate if you wish to change the setting.

## Video & Audio Settings

Video and audio are the heart of a network camera's functionality. The settings for video and audio can be found under **Settings > Video & Audio**. Under this section, you can access basic video and audio settings, video appearance parameters, video stream settings, as well as audio parameters.

### Basic Settings

Basic settings pertain to simple live-view tweaks. These parameters can be found under **Video & Audio > Basic Settings**.

- **Video Orientation**

In certain mounting situations, the default video output may not be oriented correctly. This setting allows you to change the orientation of the output video.

- **Flip** - flips the image vertically.
- **Mirror** - flips the image horizontally.

- **BNC Out (not for CAM2311SC/2511SC)**

- NTSC
- PAL
- Disable

- **Stream Buffer**
  - Off
  - On
- **FPS\BitRate Display**
  - Off
  - On

### Text Overlay Setting

The text overlay involves is the text displayed in the black bar at the top of the output screen. You can display multiple text messages at the same time. (Only the camera name will display if the resolution is 160 x 120).

- **Include Date** - Displays the current date.
- **Include Time** - Displays the current time.
- **Camera Name** - Displays the name of the camera.

### Video Codec Setting

H.264 profile can be further set to:

- **BaseLine** - restricts the encoder to certain basic features only for mobile applications.
- **Main** - is used for standard-definition digital TV broadcasts that use the MPEG-4 format as defined in the DVB standard.
- **High** - is used for high-definition broadcasts and disc storage applications.

## Image Appearance Settings

These settings, found under **Video & Audio > Image Appearance**, deal with the video output of the camera. There are two tabs, *Image Attributes* and *Sensor Configuration*, as well as *Advanced Settings*.

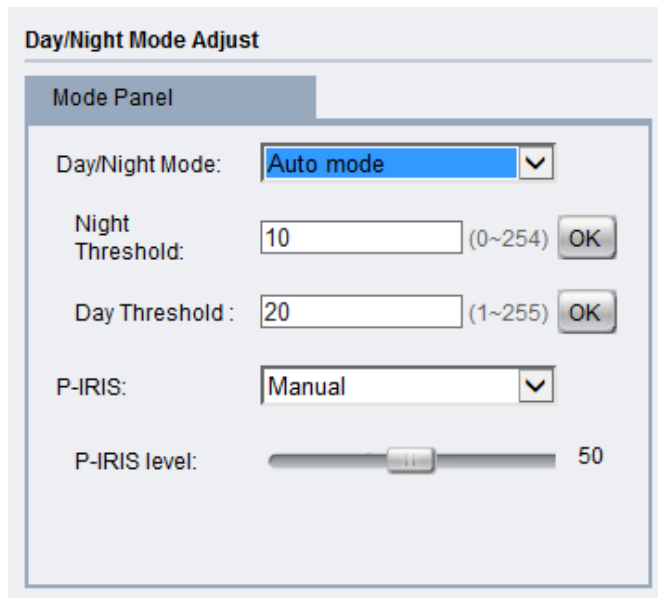

### Image Appearance (for CAM2311/2331/2331P)

The screenshot displays the 'Image Appearance Settings' web interface. At the top, a navigation bar includes 'Live View', 'Settings' (highlighted), 'Logout', and 'Help'. The user is logged in as 'admin' on '2013-10-29 13:21:35'. A left sidebar lists configuration categories: General, Network, Video & Audio (selected), PTZ, Recording, Event Notification, and System. Under 'Video & Audio', sub-items include Basic Settings, Image Appearance (selected), Video Streams, and Audio. The main content area is titled 'Video & Audio > Image Appearance' and 'Image Appearance Settings'. It features a live video feed showing a timestamp '2013-10-29 13:21:34'. To the right of the feed is the 'Day/Night Mode Adjust' section, which includes a 'Mode Panel' with a 'Day/Night Mode' dropdown set to 'Auto mode'. Below this are input fields for 'Night Threshold' (10, range 0~254) and 'Day Threshold' (20, range 1~255), each with an 'OK' button. Further down are 'P-IRIS' (Manual) and 'P-IRIS level' (50, with a slider). Below the video feed are radio buttons for 'Day' (selected) and 'Night'. A tabbed interface at the bottom includes 'Image Attributes' (selected), 'Basic Settings', 'Advance Settings', and 'Sensor Attributes'. The 'Image Attributes' tab shows sliders for 'Brightness' (50), 'Contrast' (30), 'Saturation' (65), and 'Sharpness' (70). A 'Default' button is located at the bottom right of the settings area.

## Day/Night Mode Adjust

### Mode Panel

**Day/Night Mode** - Sets the day (color) and night (black and white, IR cut filter off where applicable.) Night mode sacrifices color information to produce a clear picture with less light.

Day/Night Mode Adjust

Mode Panel

Day/Night Mode: Auto mode ▼

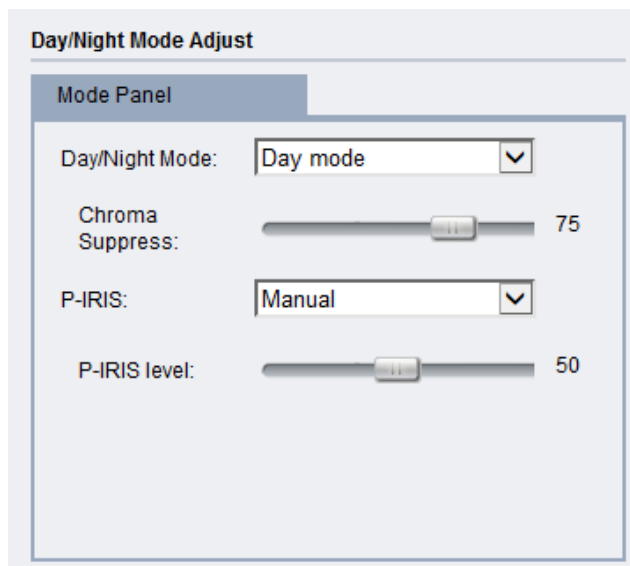

Night Threshold: 10 (0~254) OK

Day Threshold : 20 (1~255) OK

P-IRIS: Manual ▼

P-IRIS level: 50

- **Auto** - The camera will determine when the light levels require a switch.
  - **Night Threshold** - The threshold which the camera will switch to night mode.
  - **Day Threshold** - The threshold which the camera will switch back to day mode.
- **P-IRIS (CAM2331P)**
  - **Auto** - Adjust the P-Iris automatically.
    - **P-Iris Sensitivity**
    - **P - Iris Level**
  - **Manual** -Adjust the P-Iris manually.
    - **P - Iris Level**

- **Day mode** - Forces day mode.
  - **Chroma Suppress** - Reduces the false color phenomena.
- **P-IRIS (CAM2331P)**
  - **Auto** - Adjust the P-Iris automatically.
    - **P-Iris Sensitivity**
    - **P - Iris Level**
  - **Manual** -Adjust the P-Iris manually.
    - **P - Iris Level**

**Day/Night Mode Adjust**

Mode Panel

Day/Night Mode:  ▼

P-IRIS:  ▼

P-IRIS level:  50

- **Night mode** - Forces night mode.
- **P-IRIS (CAM2331P)**
  - **Auto** - Adjust the P-Iris automatically.
    - **P-Iris Sensitivity**
    - **P - Iris Level**
  - **Manual** -Adjust the P-Iris manually.
    - **P - Iris Level**

**Day/Night Mode Adjust**

Mode Panel

Day/Night Mode: Schedule for day mode ▼

From: 6:0 (HH:MM) OK

To: 18:0 (HH:MM) OK

P-IRIS: Manual ▼

P-IRIS level: 50

- **Schedule for day mode** - Allows the user to set a time for day/night transitions.
  - **From:** - The time, in hours and minutes, when the camera will be in day mode.
  - **To:** - The time, in hours and minutes, when the camera will switch to night mode.
- **P-IRIS (CAM2331P)**
  - **Auto** - Adjust the P-Iris automatically.
    - **P-Iris Sensitivity**
    - **P - Iris Level**
  - **Manual** -Adjust the P-Iris manually.
    - **P - Iris Level**

## Image Attributes

The screenshot shows the 'Image Attributes' settings panel. At the top, there are two radio buttons: 'Day' (selected) and 'Night'. Below them are four tabs: 'Image Attributes' (selected), 'Basic Settings', 'Advance Settings', and 'Sensor Attributes'. The main area contains four sliders with their current values displayed on the right: Brightness (50), Contrast (30), Saturation (65), and Sharpness (70).

These parameters deal with the image lighting and color. All parameters are values ranging from (0) to (100). Dragging the slider to the right increases the value, while dragging to the left lowers the value. The adjustments will be displayed in real-time in the window to the left of the sliders.

- **Brightness** - Adjusts the perceived light intensity of the image.

**Note:** In certain situations, the sensor may experience banding issues. In these cases, please raise the brightness.

- **Contrast** - Adjusts the overall difference in the light vs dark areas.
- **Saturation** - Adjusts the colorfulness of a color relative to its own brightness.
- **Sharpness** - Adjusts the edge contrast of the image.

## Basic Settings

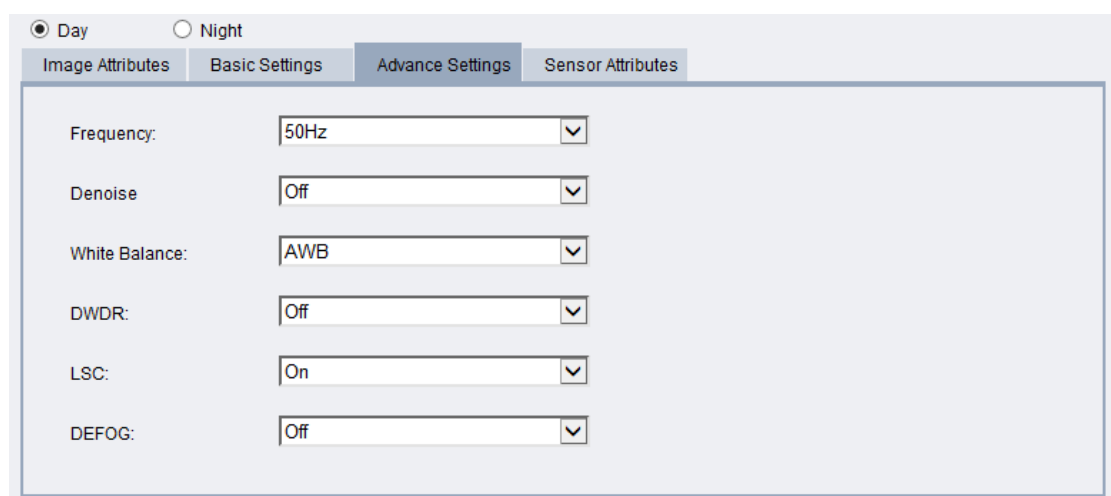

The screenshot shows the 'Basic Settings' panel. At the top, there are two radio buttons: 'Day' (selected) and 'Night'. Below them are four tabs: 'Image Attributes', 'Basic Settings' (selected), 'Advance Settings', and 'Sensor Attributes'. The main area contains several settings: AGC (Automatic Gain Control) with a slider set to 45; Exposure set to 'AUTO' in a dropdown menu; Max Shutter Speed set to '1/25' in a dropdown menu; Min Shutter Speed set to '1/50000' in a dropdown menu; and Slow Shutter with three radio buttons: 'OFF' (selected), 'x2', and 'x4'.

- **AGC Gain** - Automatic gain control (AGC) adjusts the video gain level to a variety of inputs. This setting provides a baseline value for the AGC. Values higher than this will be darkened, and values that are

lower will be brightened. AGC should be adjusted so that the area of interest is best lit.

- **Exposure** - Sets how the camera captures images. Longer shutter times allow more light into the sensor, resulting in a cleaner picture, however longer shutter times can result in motion blur.
- **Max Shutter Speed** - users can choose the Max Shutter Speed from 1/30, 1/60, 1/120, 1/1000 and 1/10000.
- **Min Shutter Speed** - users can choose the Min Shutter Speed from 1/30, 1/60, 1/120, 1/250, 1/500, 1/750, 1/1000, 1/1500, 1/2000, 1/10000 and 1/100000.
  - **Slow Shutter** - Slows the shutter speed to 1/2 or 1/4.

## Advanced Settings

Day Night

Image Attributes Basic Settings Advance Settings Sensor Attributes

Frequency: 50Hz

Denoise Off

White Balance: AWB

DWDR: Off

LSC: On

DEFOG: Off

- **Frequency** - The user can choose to compensate for 50Hz or 60Hz lighting.
- **Denoise** - Removes video noises.
- **White Balance** - This setting allows users to choose the color balancing method used.
  - **AWB** - Automatically chooses white level.
  - **MWB** - The user must specify the red and blue gain levels to achieve the correct white level.
    - **R Gain** - The gain applied to the red video channel.
    - **B Gain** - The gain applied to the blue video channel.

- **DWDR** - Specifies if the wide dynamic range (WDR) function is activated. If activated, the WDR function will attempt to preserve detail at contrast extremes.
- **LSC**(Lens Shading Compensation) - Lens shading is the reduction in light falling on the image sensor away from the center of the image caused by physical obstructions. To suppress the lens shading effect on the corners is called the lens shading compensation. DEFOG- Adjusts picture quality during bad weather conditions.
- **Defog** - Adjusts picture quality during bad weather conditions.

## Sensor Attributes

☒ Day    ☐ Night

Image Attributes    Basic Settings    Advance Settings    **Sensor Attributes**

Back Light:    ☐ Disable    ☐ BLC    ☒ HSBLC

HSBLC Grid:    Off

HSBLC Level:    50

- **Black light**
  - **BLC** (Backlight compensation) - Adjusts video gain to automatically correct the exposure of objects that are strongly backlit. This brightens the image, at the cost of overexposing areas of high illumination.
    - **BLC Area View** - Users can choose to view the area for BLC effect. When it is opened, you will see the grids showing on the live view screen.
    - **BLC Level**
  - **HSBLC** (High Suppression Backlight Compensation) - Backlight compensation helps resolve detail in darker areas even when brightly lit objects are in view. Highlight suppression goes further, darkening full white areas to achieve optimum video quality.

- **HSBLC Grid** - Users can choose to view the areas for HSBLC effect. When it is opened, you will see four squares showing on the live view screen.
- **HSBLC Level**

- **Brightness** - Adjusts the perceived light intensity of the image.

**Note:** In certain situations, the sensor may experience banding issues. In these cases, please raise the brightness.

- **Contrast** - Adjusts the overall difference in the light vs. dark areas.
- **Saturation** - Adjusts the colorfulness of a color relative to its own brightness.
- **Sharpness** - Adjusts the edge contrast of the image.
- **Frequency** - The user can choose to compensate for 50Hz or 60Hz lighting.
- **Exposure Mode** - Fixed/Auto
- **Max Shutter Speed** - The user may choose the following shutter speeds: 1/1s ~ 1/1000000s.
- **Min Shutter Speed** -The user may choose the following shutter speeds: 1/1s ~ 1/1000000s.
- **WDR** -Off /DWDR (Digital Wide Dynamic Range) /BLC(Backlight Compensation) / HDR (High Wide Dynamic Range, for CAM2441P only)
- **Auto Iris** - On/Off
- **AGC**- Automatic gain control (AGC) adjusts the video gain level to a variety of inputs. This setting provides a baseline value for the AGC. Values higher than this will be darkened, and values that are lower will be brightened. AGC should be adjusted so that the area of interest is best lit.

## Advanced Day Profile/Night Profile

The parameters deal with the image lighting and color. Dragging the slider to increase and lower the value. The adjustments will be shown in the preview window.

### Image Adjust

- **Brightness** - Adjusts the perceived light intensity of the image.

**Note:** In certain situations, the sensor may experience banding issues. In these cases, please raise the brightness.

- **Contrast** - Adjusts the overall difference in the light vs dark areas.
- **Gamma** - Adjusts the color error of the image.
- **Saturation** - Adjusts the colorfulness of a color relative to its own brightness.
- **Sharpness** - Adjusts the edge contrast of the image.

## Exposure

The screenshot shows the 'Exposure' settings panel. At the top, there are two radio buttons: 'Day Profile' (selected) and 'Night Profile'. Below this is a horizontal tab bar with seven tabs: 'Image Adjust', 'Exposure' (active), 'Luminance Ctrl', 'White Balance', 'Noise Reduction', 'Edge Enhance', and 'Lens Correction'. The main area contains the following settings:

- Frequency:** A dropdown menu set to '60Hz'.
- Exposure Mode::** Two radio buttons: 'Fixed' and 'Auto' (selected).
- Max Shutter Speed:** A dropdown menu set to '1/30'.
- Min Shutter Speed:** A dropdown menu set to '1/2000'.
- WDR:** Three radio buttons: 'OFF' (selected), 'DWDR', and 'BLC'.

The parameters deal with the image lighting and color. Dragging the slider to increase and lower the value. The adjustments will be shown in the preview window.

- **Frequency** -Reduces flickering caused by the difference in frequency of the system and the environment lighting. The user can choose to compensate for a 50Hz or 60Hz lighting.
- **Exposure Mode** -Sets how the camera captures images. Longer shutter times allow more light into the sensor, resulting in a cleaner picture, however longer shutter times can result in motion blur.
  - **Fixed**
  - **Auto** -The camera will automatically change the shutter speed and gain balance between image quality and frame rate when there is insufficient light to preserve both.
- **Max Shutter Speed** -Can be selected from 1/1 to 1/1000000.
- **Min Shutter Speed** -Can be selected from 1/1 to 1/1000000.
- **WDR** - Can be set as off to disable this functionality, set as DWDR BLC or HDR (for CAM2441P only) to enable the functionalities.

## Luminance Ctrl

The screenshot shows the 'Luminance Ctrl' settings panel. At the top, there are two radio buttons: 'Day Profile' (selected) and 'Night Profile'. Below these are seven tabs: 'Image Adjust', 'Exposure', 'Luminance Ctrl' (active), 'White Balance', 'Noise Reduction', 'Edge Enhance', and 'Lens Correction'. The main area contains three controls: 'Auto Iris' with a dropdown menu set to 'On', 'Target Luminance' with a slider bar ranging from 0 to 80, and 'AGC' with a slider bar ranging from 0 to 60.

- **Auto Iris** - On/Off
- **Target Luminance** - Adjusts the lightness of the image.
- **AGC** - Automatic gain control (AGC) adjusts the video gain level to a variety of inputs. This setting provides a baseline value for the AGC. Values higher than this will be darkened, and values that are lower will be brightened. AGC should be adjusted so that the area of interest is best lit.

## White Balance

The screenshot shows the 'White Balance' settings panel. At the top, there are two radio buttons: 'Day Profile' (selected) and 'Night Profile'. Below these are seven tabs: 'Image Adjust', 'Exposure', 'Luminance Ctrl', 'White Balance' (active), 'Noise Reduction', 'Edge Enhance', and 'Lens Correction'. The main area contains a 'White Balance' dropdown menu set to 'AWB' and a 'Get Color Temp.' button.

This setting allows users to choose the color balancing method used.

- **AWB** - Automatically chooses white level.
- **MWB** - The user must specify the red and blue gain levels to achieve the correct white level.

## Noise Reduction

The screenshot shows the 'Noise Reduction' settings panel. At the top, there are two radio buttons: 'Day Profile' (selected) and 'Night Profile'. Below these are seven tabs: 'Image Adjust', 'Exposure', 'Luminance Ctrl', 'White Balance', 'Noise Reduction' (active), 'Edge Enhance', and 'Lens Correction'. The main area contains two dropdown menus. The first is labeled 'De-noise Mode' and is set to '2D'. The second is labeled 'Mode:' and is set to 'Auto'.

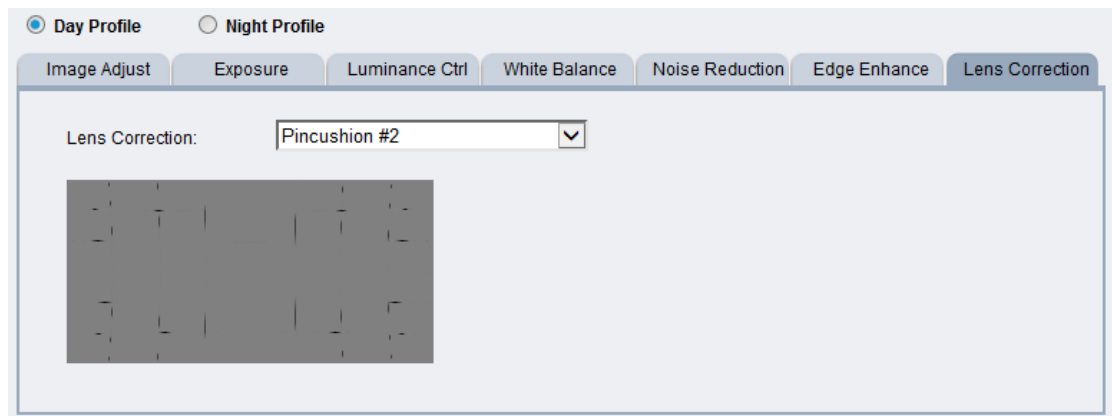

- **De-noise Mode** - Removes video noises.
  - **OFF** - Can be set to disable this functionality
  - **2DNR** - Reduces noises.
  - **3DNR** - Reduces noises in low light conditions and even with moving objects.
  - **BLEND** - Blends 2DNR and 3DNR to create clear images.
- **Mode** - Auto/Manual

## Edge Enhance

The screenshot shows the 'Edge Enhance' settings panel. At the top, there are two radio buttons: 'Day Profile' (selected) and 'Night Profile'. Below these are seven tabs: 'Image Adjust', 'Exposure', 'Luminance Ctrl', 'White Balance', 'Noise Reduction', 'Edge Enhance' (active), and 'Lens Correction'. The main area contains two sliders. The first is labeled 'Noise Sensitivity:' and is set to 5. The second is labeled 'Edge Strength Clip:' and is also set to 5.

- **Noise Sensitivity** - Senses the noise.
- **Edge Strength Clip** - Enhances the edges of the image.

## Lens Correction

Correct the barrel distortions and pincushion distortions of images while using wide-angle lenses.

- **Schedule for day mode** - Allows the user to set a time for day/night transitions.

The screenshot shows a software interface titled "Mode Panel". It contains several configuration options:

- Day/Night Mode:** A dropdown menu with "Schedule for day mode" selected.
- From:** A time input field showing "6:0" with "(HH:MM)" as a placeholder, followed by an "OK" button.
- To:** A time input field showing "18:0" with "(HH:MM)" as a placeholder, followed by an "OK" button.
- Focus Value Display:** A dropdown menu with "Off" selected.
- Dead Pixel Correction:** A dropdown menu with "On" selected.

- **From:** - The time, in hours and minutes, when the camera will be in day mode.
- **To:** - The time, in hours and minutes, when the camera will switch to night mode.
- **Focus Value Display** - On/Off
- **Dead Pixel Correction** - On/Off

- **Digital Input** - The Camera automatically removes the IR cut filter when DI triggers.

**Mode Panel**

Day/Night Mode:	Digital Input	▼
High Profile:	Day	▼ when DI status: High
Low Profile:	Night	▼ when DI status: Low
Focus Value Display:	Off	▼
Dead Pixel Correction:	On	▼

- **High Profile** - Day/Night.
- **Low Profile** - Day/Night.
- **Focus Value Display** - On/Off
- **Dead Pixel Correction** - On/Off

## Video Streams

The configuration for video streams, including resolution, frame rate and image quality parameters can be found under **Video & Audio > Video Streams**.

## Field of View (FoV)

FoV can be defined as the width and height of a scene to be monitored.

Different Fields of Views are available for selection, 5MP 1920P (Max. 14fps, for CAM2511 / 2511SC only), 3MP 1536P (Max. 21fps, for CAM2511 / 2511SC / 2441 only), Full HD 1080P (Max. 30fps).

The page is split into settings for 2 streams. Common settings are:

Video & Audio > Video Streams

**Video Stream 1 Settings**

Video Format:

Video Resolution:

Video Frames per Second: ☐ 30 ☒ 15 (1~30)

Key Frame Interval:

Video Quality Settings

☒ Constant Bit Rate: ☐ 4 Mbps ☒ 4096 (32-10240)kbps

☐ Fixed Quality:

**Video Stream 2 Settings**

Video Format:

Video Resolution:

Video Frames per Second: ☐ 30 ☒ 15 (1~30)

Key Frame Interval:

Video Quality Settings

☒ Constant Bit Rate: ☐  ☒ 512 (32-10240)kbps

☐ Fixed Quality:

- **Video format** - The compression format for the video stream.
  - **H.264** - Provides the best compression, and clear picture, but is processor intensive.
  - **MPEG4** - Provides more compression than MJPEG, but loses picture quality.
  - **MJPEG** - Provides minimal compression, with the best picture quality. Each frame is stored as a discrete JPEG. This option is only available in Stream 1.
- **Video Resolution** - Sets the resolution of the video output. The following options are available: QSXGA (2560x1920, Stream 1 only), QXGA (2048x1536, Stream 1 only), 1080P (1920 x 1080, Stream 1 only), SXGA (1280 x 1024, Stream 1 only), 960P (1280x960, Stream 1 only),

720P (1280 x 720), D1 (720x480), VGA (640x480), QVGA (320x240, Stream 2 only).

- **Video Frames per Second** - Sets the number of frames per second. 1, 3, 5, 10, 15, 20, 25, 30 FPS are possible values. You can also choose to type in the values you want (the range is from 1~30).
- **Key Frame Interval** - Sets the period between minimally compressed recovery frames that don't require other video frames to decode. 1/4s, 1/2s, 1s, 2s, 3s, and 4s are possible values.
- **Video Quality Settings** - Sets the quality of the video image.
  - **Constant Bit Rate** - In this mode, the camera will maintain a constant bit rate output, regardless of video quality. Bit rates available are dependent on the video resolution chosen, and range from 32 kbps to 10 Mbps. You can also choose to type in the values you want (the range is from 32~10240).
  - **Fixed quality** - In this mode, the camera will attempt to maintain a constant quality output, up to a maximum bandwidth of 10 Mbps.

**Settings can be further defined when no motions occur.**

**When No Motion Settings**

☒ Enable

**Video Stream 1**

Video Frames per Second:  (1-30)

Constant Bit Rate:  (32-10240)kbps

**Video Stream 2**

Video Frames per Second:  (1-30)

Constant Bit Rate:  (32-10240)kbps

No Motion Post Setting:  31 s (Normal change to no motion)

**Settings can be further defined when the network disconnection occur.**

Enable this option to adjust the Video Frames, Constant Bit Rate for Video Stream 1 and 2.

#### When Network Disconnection Setting

☒ Enable

##### Video Stream 1

Video Frames per Second:  (1-30)

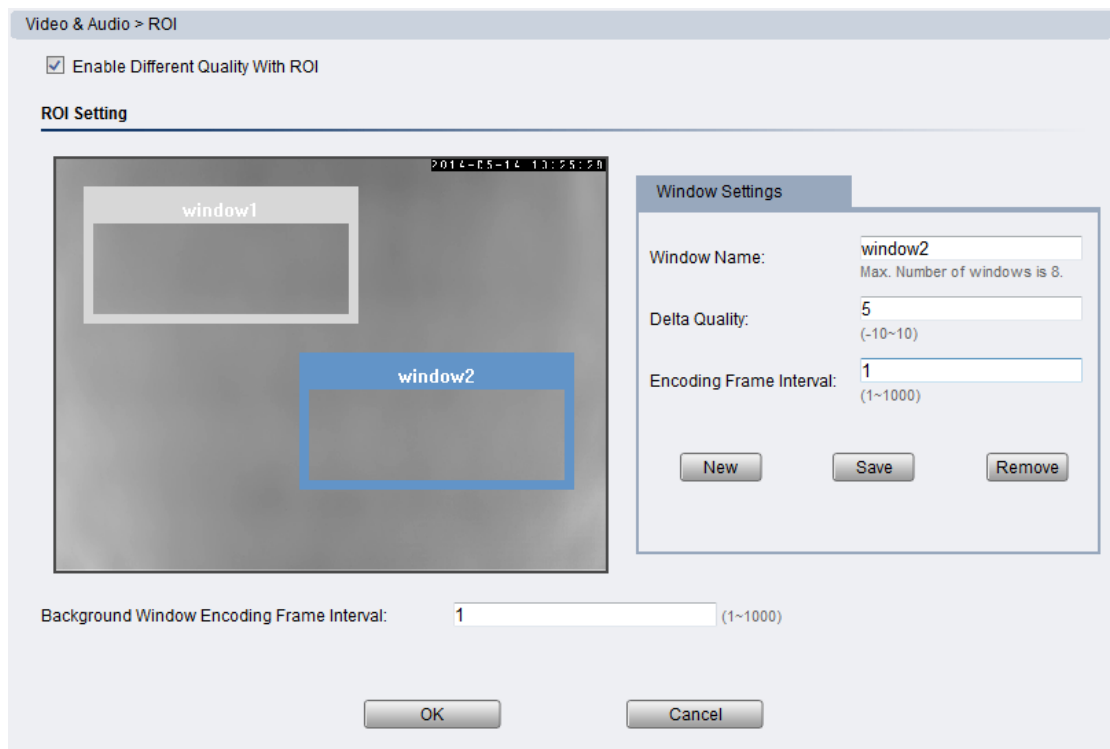

Constant Bit Rate:  (32-20480)kbps

##### Video Stream 2

Video Frames per Second:  (1-30)

Constant Bit Rate:  (32-20480)kbps

## ROI Settings

Use the Region of Interest (ROI) to execute different functions in one image.

- **Window Settings**
  - **Window Name** - Specify a name for a different window.
  - **Delta Quality** - Can be selected from -10 to +10.
  - **Encoding Frame interval** - Can be selected from 1 to 1000.
- **Background Window Encoding Frame Interval** - Can be selected from 1 to 1000.

## Privacy Mask Setting

Video & Audio > Privacy Mask Setting

☒ Enable Privacy Mask

**Privacy Mask Setting**

Window Settings

Window Name:

Color:  ▼

**New** Save Remove

Use **New** button to create privacy mask on the video, up to 3 masks can be created. The window name and the mask color can be further defined.

## Audio Settings

The audio settings, under **Video & Audio > Audio Settings**, contain parameters dealing with audio coming from the cameras built in mic, or an external microphone.

The screenshot shows the 'Audio Settings' page in a web application. The top navigation bar includes 'Live View', 'Settings', 'Logout', and 'Help'. The user is logged in as 'admin' on '2014-05-14' at '13:36:50'. The left sidebar shows a menu with 'General', 'Network', 'Video & Audio' (selected), 'PTZ', 'Recording', 'Event Notification', and 'System'. Under 'Video & Audio', there are sub-items: 'Basic Settings', 'Image Appearance', 'Video Streams', 'ROI', 'Privacy Mask', and 'Audio' (selected). The main content area is titled 'Video & Audio > Audio'. It contains three sections: 'Audio Settings' with 'Audio In:' set to 'Off' (radio buttons for Off and On); 'Line Selection' with 'Audio In:' set to 'Line In'; and 'Codec Settings' with 'Audio Codec:' set to 'G711 U-Law' (dropdown menu). At the bottom are 'OK' and 'Cancel' buttons.

- **Mute** - Selects whether or not to mute the incoming audio from the camera.
- **Audio In** - Selects the source for the camera audio feed. **Line In**, an external source connected to the camera's line-in port, is the only option.

**Note:** For models with built-in microphone, *Microphone* option can be selected in *Line Selection*.

- **Audio Codec** - G.711 U-law, G.711 A-law, and ADPCM are methods for digitally encoding audio signals. Only one bit rate, 32 Kbps, is currently supported. Audio will be encoded at this bit rate.

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## PTZ

PTZ > RS-485 Settings

**RS-485 Settings**

Baud Rate: 9600

**PTZ Settings**

☐ Enable PTZ

PTZ Decoder Address: 1

PTZ Protocol: Pelco-P

OK Cancel

RS-485 is a control standard that is used as a basis for controlling point-tilt-zoom (PTZ) cameras or mounts. The PTZ menu **Settings > PTZ > RS-485 Settings** allows configuration of the RS-485 controls.

The following parameters are configurable:

- **Baud rate** - The baud rate to be used with the RS-485 device. Options are 2400, 4800, 9600, 19200, 115200 bd.
- **Enable PTZ** - This check box activates PTZ service, allowing PTZ controls to be displayed.
  - **PTZ decoder address** - The address of the PTZ decoder, which decodes commands and turns them into electrical signals to drive the PTZ mechanism. This address is a discreet number based on PTZ decoder's connection.
  - **PTZ protocol** - The protocol used by the PTZ. Two of the most common protocols are supported: Pelco-D and Pelco-P.

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## Recording

The Recording menu, **Settings> Recording**, deals with recording settings and managing recorded video files.

### Recording Basic Settings

Recording basic settings, **Recording > Recording Basic Settings** are parameters which deal with the recording location and scheduling.

The screenshot shows the 'Recording > Recording Basic Settings' web interface. The top navigation bar includes 'Live View', 'Settings', 'Logout', and 'Help'. The user is logged in as 'admin' on '2014-05-19 17:33:28'. The left sidebar contains a tree view with categories: 'General', 'Network', 'Video & Audio', 'PTZ', 'Recording' (selected), 'Event Notification', and 'System'. Under 'Recording', 'Recording Basic Settings' is selected, and 'Recorded File Management' is listed below it. The main content area is titled 'Recording > Recording Basic Settings' and contains three sections: 1. 'Record to Memory Card when connection is lost' with a checked 'Enable Recording' checkbox, an unselected radio button for 'Connection resume starts upload to FTP(.avi)' (with a 'Network Bandwidth Using' field set to 1536 KBps), and a selected radio button for 'Passive download by NVR Server(private format)'. 2. 'Manual Record Setting' with a 'Manual Record To:' field containing 'C:\IPCamera\Record' and a 'Browse' button. 3. 'Event/Schedule Record Setting' with an 'Event/Schedule Record To:' section containing three radio buttons: 'microSD Card' (unselected), 'Remote Storage' (selected), and 'iSCSI Storage' (unselected). At the bottom are 'OK' and 'Cancel' buttons.

The following parameters can be configured within this menu:

- **Record to Memory Card when connection is lost**

When enabled, video will automatically be recorded onto the microSD card if the network connection is lost. When a network connection is re-established, recording will switch back to the remote destination. If this feature is turned off, there will be no recording at all when if network connection is lost.

- **Enable Recording** - Tick it if you want the video to be recorded on to the micro SD card.
- **Connection Resume Send to FTP** - Tick **Enable Recording** if you want the video to be uploaded to FTP automatically after the network connection is recovered.

**Network Bandwidth Using** - The speed limitation of the FTP.

- **Passive download by NVR Server (private format)**
- **Manual Record Setting**
  - **Manual Record To** - Defines the path for manual recording.
  - Screenshots and image recordings will be saved in this location.
- **Event/Schedule Record Setting** - Allows users to set the destination for event or scheduled recording.
  - microSD Card
  - Remote Storage
  - **ISCSI Storage** - Before selecting the ISCSI Storage as your recording destination, settings of Event Server under the Event Notification should be done to enable the ISCSI Storage. Go to *Event Notification > Event Server* to set the ISCSI Storage Settings.

**ISCSI Storage Settings**

## Recorded File Management

This section, located at **Recording > Recorded File Management** allows users to manage videos recorded on the microSD cards.

### Locating Video Files

To locate video files from a specific time frame, enter a begin and end time in the **From:** and **To:** fields below, and click **Search**.

Each video file will have an entry containing:

- **Time** - The time the video was recorded, also the filename of the entry: YYYY\_MM\_DD\_HH\_MM\_SS.avi
- **Media Type** - The encoding/compression method
- **Trigger Type** - What type of action triggered this recording eg. if it was alarm recording or scheduled recording.
- **Locked** - The lock state of the alarm.

The video records located will be split into pages. The information on these

- << - Click to go to the first page of the recorded files list.
- < - Click to go to the previous page of the recorded files list.
- > - Click to go to the next page of the recorded files list.
- >> - Click to go to the last page of the recorded files list.
- **Forward To:** - This dropdown can be used to skip to a page number.

You may also narrow the entries displayed by clicking on the **Media Type** column. This will give you the option of choosing *All*, *H264*, *MPEG4*, or *MJPEG* types. The system will only show video files of the format selected.

## Managing Video Files

Once you have located the video files of interest you may select them by checking the box in the leftmost column of the entry. You can also select all displayed entries by checking the box in the header row.

There will be two buttons in each entry:

- **Play** - Plays the video file in local helper application.
- **Download** - Downloads video files. Select one or more video files and click **Download**; Choose location to save the video file(s) onto your local PC.

Other actions that you can perform:

- **Lock/Unlock** - Locks/Unlocks video files. Locked files cannot be removed. Select one or multiple video files and click Lock/Unlock. When a file is locked, the Locked status will display yes.
- **Remove** - Manually deletes stored video files. Select one or more video files and click **Remove** to delete the file(s).

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

**Note:** The video files shown in Recorded File Management are files stored in the microSD card. You can also record live video by clicking the record button in the Live View screen, which will be stored directly into your local computer, and are not managed by this function. Please refer to the section on [Manual Record](#) for more information on this functionality.

## Event Notification

Event Notification settings, found under **Settings > Event Notification**, deal with the event detection, scheduled recording, and notification abilities of the camera.

### Event Server

The event server, which can be configured under **Event Notification > Event Server**, is the communications center of the camera. This section deals with the configuration of E-mail and FTP notifications, HTTP and TCP triggers, NAS settings and iSCSI Storage settings.

The screenshot shows a web interface for configuring the Event Server. The left sidebar contains a navigation menu with the following items: Live View, Settings (selected), Logout, and Help. Under Settings, the following sub-items are listed: General, Network, Video & Audio, PTZ, Recording, Event Notification (selected), Event Server (selected), Event Alert Action, Motion Detection, DI & DO, Event Settings, and System. The main content area is titled 'Event Notification - Event Server' and contains several configuration sections:

- Email Settings:** Includes checkboxes for SSL, fields for Sender Email Address (eg.template@gmail.com), Recipient Email Address (eg.template@gmail.com), Server Address, User Name, Password, and SMTP Server Port (25). A 'Test' button is present.
- FTP Settings:** Includes fields for Server Address, FTP Server Port (21), User Name, Password, and FTP Folder Name.
- HTTP Servers:** Includes checkboxes for HTTP, fields for URL (eg.http://www.google.com), Port (0), User Name, and Password.
- TCP Servers:** Includes checkboxes for TCP, fields for IP Address, and Port (0).
- NAS Settings:** Includes fields for Server Address, User Name, Password, and Folder Name.
- iSCSI Storage Settings:** Includes fields for Initiator Node Name (iqn.2011-12.com:camera:00d023603bd3), Server Address, Port (0), and a 'Target' button. It also includes checkboxes for CHAP logon information and Perform mutual authentication, each with associated User Name and Target Secret fields.

At the bottom of the page, there are 'OK' and 'Cancel' buttons.

## Email Settings

Email settings are used to configure e-mail notifications.

- **Sender Email Address** - The return e-mail address for notifications. This should be your notification address.
- **Recipient email address** - The e-mail address notification emails will be sent to. Only one email address can be entered.
- **Server address** - The IP or address of the e-mail server.
- **User Name** - The user name of the notifications e-mail account.
- **Password** - The password of the e-mail account.
- **SMTP Server Port** - the SMTP port of the email server; Default 25.
- **Test** - Click this button to send a test email. E-mails will only be sent if all parameters are entered correctly.

## FTP Settings

FTP settings are used to configure recording to a remote location via the file transfer protocol.

- **Server Address** - The address of the FTP server.
- **FTP Server Port** - The port number of the FTP server; Default 21.
- **User Name** - The user name of the FTP account.
- **Password** - The password of the FTP account.
- **FTP Folder Name** - The name of the folder on the FTP site which video files will be stored in.

## Http Servers

- **URL** - The address.
- **Port** - The port number for the web service. It is usually 80.
- **User Name** - The username of the camera. **The default user name is admin.**
- **Password** - The password of the camera. **The default password is admin.**

## TCP Servers

- **IP Address** - The address of the TCP server.
- **Port** - The port number of the TCP server.

## NAS Settings

NAS settings are used to configure recording to network attached storage.

- **Server Address** - The address of the NAS server.
- **User Name** - The user name of the NAS account.
- **Password** - The password of the NAS account.
- **Folder Name** - The name of the CIFS account folder on the server.

## iSCSI Storage Settings

- **Initiator Node Name** - Your Internet Small Computer System Interface's name.
- **Server Address** - Your server address.
- **Port**

- **CHAP logon information**

**User Name** - Your user name.

**Target Secret** - Created to manage the connections between an iSCSI device and the servers that need to access it.

- **Perform mutual authentication** - Two parties authenticating each other suitably.

**User Name** - Your user name.

**Target Secret** - Defines the portals (IP addresses) that can be used to connect to the iSCSI device, as well as the security settings that the iSCSI device requires to authenticate the servers that are requesting access to its resources.

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## Event Alert Action

### General Settings

- **Set Time Interval between Triggers (sec)**

### HTTP Trigger Settings

Set the CGI rule for HTTP triggers.

- **DI1** - /surveon-cgi/param.cgi?action=update&USER=admin&PWD=admin&System.LiveViewPor=6002.
- **DI2** - /surveon-cgi/param.cgi?action=update&USER=admin&PWD=admin&System.LiveViewPor=6002.
- **Network Resume** -  
/surveon-cgi/param.cgi?action=update&USER=admin&PWD=admin&System.LiveViewPor=6002.

### Network Resume Settings

- **NVR Server IP Address** - The IP address of the NVR server.

The system will start to ping this IP for three times, and if the results are different, the network connection will be defined as lost. The video will be recorded automatically to the micro SD card, and when the connection is recovered, it will be uploaded to the FTP.

**Note:** Please refer to Recording Basic Settings section for more details.

## Motion Detection

The motion detection functionality of the camera can be found under **Event Notification > Motion Detection**.

## Window Settings

Motion detection is activated by checking the **Enable Motion Detection** box.

Click the *Window Settings* tab to enter the window configuration, and click **New** to add a new detection window. A maximum of 3 motion detection windows can be added. Each new window will be created with a default name *Window N*, where *N* is the number of the window. After creating the window, clicking it will select the window. You can drag and resize the window using your mouse. You can also change the following parameters:

- **Window Name** - The name of the motion detection window.
- **Trigger Interval** - The time interval between motion triggers. Options available are: 200 ms , 400 ms, 800 ms, and 1000 ms.
- **Trigger Threshold** - The percentage change in the window before a motion alarm is triggered.
- **Sensitivity** - The sensitivity of the motion box.

Click **Save** to save all settings. Settings of existing windows can also be changed by selecting the window and changing the settings. To delete a window, select a window in and click **Remove**.

### Activity Status Display

The *Activity Status Display* tab displays the amount of motion detected in a selected window. By raising the **Sensitivity** of the window the motion values for a given motion, which are shown in yellow, will be higher. When the motion value reaches or crosses the **Trigger Threshold**, denoted by the red line, a motion event will be triggered. Use Activity Status Display to check if the setting of threshold is reasonable. For smaller motions below the set number, the motions won't trigger alarm. Motion alarm handling and notifications can be configured under [Event Settings](#).

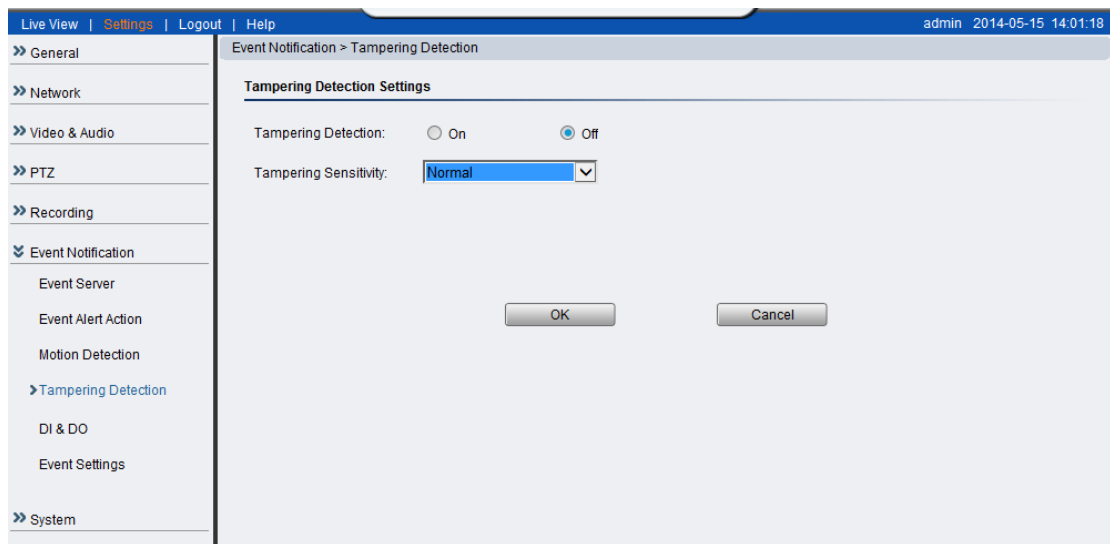

### Activate Motion Detection By: Auto/Schedule

- **Auto** - As long as **Enable Motion Detection** is checked, an event is triggered.
- **Schedule** - Selecting this option allows to manually schedule the times motion detection will be active. Select the days of the week that Motion Detection is active by checking the corresponding boxes, and fill in a start time and end time for motion detection in the **From:** and **To:** boxes.

The figure shows a configuration form titled 'Activate Motion Detection By:'. It has two radio buttons: 'Auto' and 'Schedule'. The 'Schedule' option is selected. Below the radio buttons, there are seven checkboxes for the days of the week: Sun, Mon, Tue, Wed, Thu, Fri, and Sat. The 'Sun', 'Fri', and 'Sat' checkboxes are checked. Below the day checkboxes, there are two text input fields labeled 'From:' and 'To:'. The 'From:' field contains '22:00' and the 'To:' field contains '06:00'. To the right of the 'To:' field is the text '(hh:mm)'.

## Tampering Detection

Tampering detection is similar to motion detection in that it detects where there is a sudden unexpected change in the whole camera view. Parameters for this feature are found under **Event Notification > Tampering Detection**.

Tampering alarm handling and notifications can be configured under [Event Settings](#).

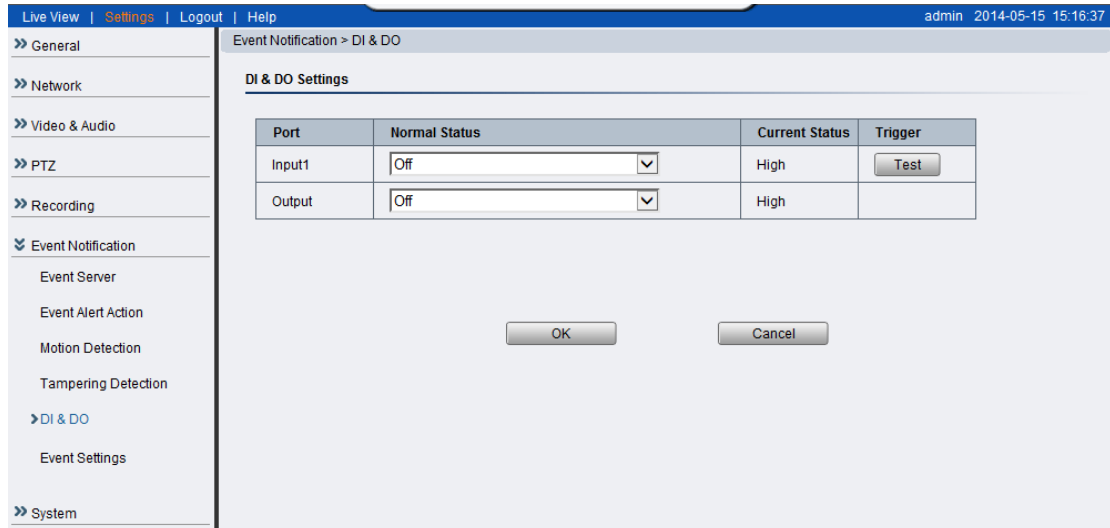

The tampering detection parameters include:

- **Tampering Detection** - Turns tampering detection on or off.
- **Tampering Sensitivity** - Sets the sensitivity of Tampering Detection. Options are *Very Low*, *Low*, *Normal*, *High*, and *Very High*. Higher sensitivities can detect more tampering attempts, but also increase the chances that the camera will produce a false alarm.

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## DI & DO

Digital Input (DI) and Digital Output (DO) stand are used for event triggering. The camera has 1 DO and 2 DI ports. Settings for these ports can be found under **Event Notification > DI & DO**. Conditions for DI and DO triggering, as well as notifications for can be set under [Event Settings](#).

## Digital Input

The two inputs are listed as Input1 and Input2 and connect to external circuits such as window break detectors. These inputs can be tested by clicking the **Test** button in the input entry.

Each input has a **Normal Status**:

- **Normal Open** - the DI requires a low voltage input, with the following configuration.

It is triggered when it does not receive this input.

- **Normal Close** - the DI requires a high voltage input (+12V), with the following configuration.

It is triggered when it does not receive this input.

- **Off** - DI inputs are closed at all times. The camera will not respond to any signals on this DI.

### Digital Output

The camera can also be configured to send signals through the digital output.

Each output has a **Normal Status**:

- **High** - DO outputs a high voltage when triggered, and is connected to the output circuit in the following manner:

- **Low** - DO acts as a ground when triggered, and is connected to the output circuit in the following manner:

- **Off** - Closes DO output; no signals will be sent.

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## Event Settings

Event settings deal with alarm handling and notification, as well as feature scheduling. These settings can be found under the **Event Notification > Event Settings** menu.

Live View | Settings | Logout | Help admin 2014-05-15 15:20:18

Event Notification > Event Settings

Event List

Name	Enable	Type	Actions
123	Enable	DI, Motion Detection, Video Loss & Tamperi...	FTP, Record, Trigger DO

Add Edit Remove

Schedule List

Name	Enable	Condition	Actions
1234	Enable	Recurrence Pattern	Trigger DO

Add Edit Remove

The event handler is rule based. There are lists for both two types of rules:

- **Event List** - Contains rules based on triggered events such as motion detection or DI triggers.
- **Schedule List** - Contains time-based rules.

Each rule has an action list. When the conditions for rule are met, the actions specified by the rule are carried out. Users may perform the following actions in both Event and Schedule lists:

- **Add** - Clicking on the **Add** button adds a new rule to a list.
- **Edit** - A selected rule may be edited by clicking on the **Edit** button.
- **Remove** - A selected rule may be deleted by clicking on the **Remove** button.

## Adding/Editing an Event Rule

Event Notification > Event Settings > Add Triggered Events

---

**General**

Name :

Set Time Interval Between Triggers (sec) :  (max hh:mm:ss)

---

**Enable Triggering By**

☒ Always

☐ Recurrence Pattern

☐ Never

---

**Triggered By**

☐ Motion Detection

☐ On Boot

☐ Video Loss & Tampering Detection

☐ Disk Full

☐ DI

☐ Day-->Night

☐ Night-->Day

---

**Trigger Actions**

Streams :  ▼

☐ Email

☐ FTP

☐ Record

☐ Trigger DO

The Add and Edit screens contain the following triggering actions:

**Note:** If editing a rule that has not been triggered, the rule will not be triggered after until after editing is complete. If the rule is triggered, any changes will not be applied until the current trigger is resolved.

## General

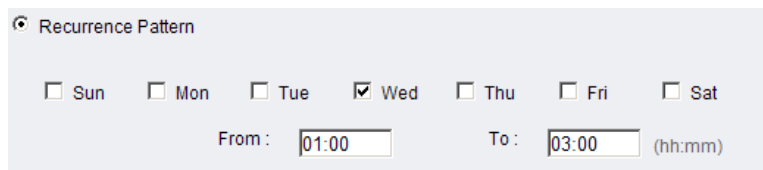

The following general fields should be filled in:

- **Name** - Specifies the name of the Event.
- **Minimum time interval between triggers** - The time frame in which a subsequent trigger of the same event will be ignored (maximum 23:59:59).

## Enable Triggering By

The next step is to specify the frequency of trigger response. 3 options are available:

- **Always** - The default setting; Triggers event when conditions are met.
- **Recurrence Pattern** - Enables triggering only if conditions are met during a specified time period. To specify the period, select the days of the week that the trigger is active by checking the corresponding boxes, and fill in a start time and end time for motion detection in the **From:** and **To:** boxes.

The screenshot shows a configuration window titled "Recurrence Pattern". It features a row of checkboxes for the days of the week: Sun, Mon, Tue, Wed, Thu, Fri, and Sat. The "Wed" checkbox is checked. Below the checkboxes, there are two input fields labeled "From:" and "To:". The "From:" field contains the value "01:00" and the "To:" field contains the value "03:00". To the right of the "To:" field, the text "(hh:mm)" is displayed.

- **Never** - The event is never triggered.

## Triggered By

After the frequency is selected, triggering conditions can be set. Multiple conditions can be set at once. Available options include:

- **Motion Detection** - Trigger when motion is detected.
  - **In Window** - Specifies the detection window that will trigger the event.

Please refer to the section on [Motion Detection](#) for details.

- **On Boot** - Trigger when camera reboots.
- **Video Loss & Tampering Detection** - Trigger when video signal is lost or tampering is detected. Please refer to the section on [Tampering Detection](#) for more detail.
- **Disk Full** - Trigger when the SD disk installed in the camera is full.

- **DI** - Trigger when a DI trigger occurs. For more information please refer to the section on [DI & DO](#).
- **Day → Night**
- **Night → Day**

### When Triggered

The actions to take when trigger conditions are met are configured here.

**Trigger Actions**

Streams :  ▼

☒ **Email**

Subject :

Additional Information :

☒ **Snapshot** ☐ **Video**

☒ **FTP**

☒ **Snapshot** ☐ **Video**

☒ **Record**

☒ **Trigger DO**

Trigger duration:  ▼

The following options are available:

- **Streams** - Selects the stream from which the snapshot or recording will be obtained.
- **Email** - E-mails notifications to the email address specified in the [Event Server](#) settings. If this option is chosen, fill in the following:
  - **Subject** - The subject line of the notification e-mail.
  - **Additional Information** - Contents of the notification e-mail.
  - **Snapshot/Video Clip** - Choose to send a snapshot or video attachment from 5s before to 30s after the trigger.
- **FTP** - uploads a snapshot or video clip to a FTP location specified in the [Event Server](#) settings.
  - **Snapshot/Video Clip** - Choose to upload a snapshot or video file from 5 seconds before to 30 seconds after the trigger. Files are sent as attachments.

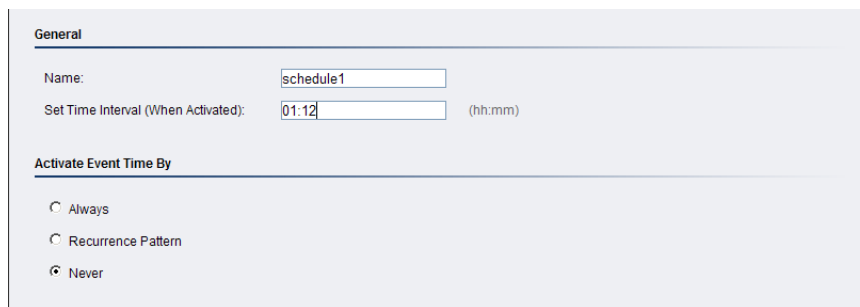

- **Record** - Records video to the server specified in the [Event Server](#) settings and the microSD card when triggered. The video clip stored on both remote storage server and local storage is a video file 35 seconds in length (5 seconds before and 30 seconds after the trigger)
- **Trigger DO** -A Digital output signal is sent when triggered.
  - **Trigger Duration** - The length of time that the DO signal is sent. Options are 1, 2, 5, 10, 20 or 30 seconds. For more information please refer to the section on [DI & DO](#).

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

### Adding/Editing a Scheduled Rule

The Add and Edit screens contain the following actions:

**General**

Name:

Set Time Interval (When Activated):  (hh:mm)

**Activate Event Time By**

☐ Always  
☐ Recurrence Pattern  
☒ Never

**Note:** If editing a rule that has not been triggered, the rule will not be triggered after until after editing is complete. If the rule is triggered, any changes will not be applied until the current trigger is resolved.

### General

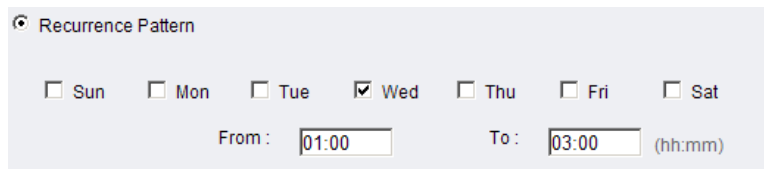

The following general fields should be filled in:

- **Name** - Specifies the name of the Event.
- **Set Time Interval (When Activated)** - The trigger time of the event (00:00 to 23:59).

### Enable Triggering By

The next step is to specify the frequency of trigger response. 3 options are available:

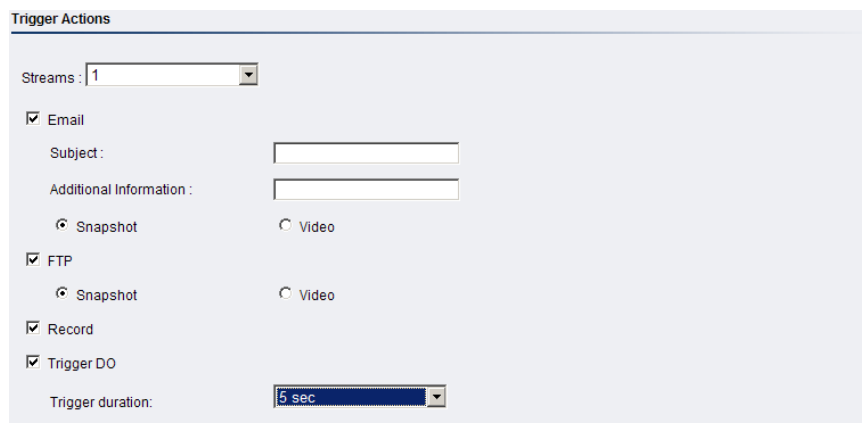

- **Always** - The default setting; Triggers event when conditions are met.
- **Recurrence Pattern** - Enables triggering only if conditions are met during a specified time period. To specify the period, select the days of the week that the trigger is active by checking the corresponding boxes, and fill in a start time and end time for motion detection in the **From:** and **To:** boxes.

The image shows a configuration window titled "Recurrence Pattern". It features a row of checkboxes for the days of the week: Sun, Mon, Tue, Wed, Thu, Fri, and Sat. The "Wed" checkbox is checked. Below the checkboxes, there are two text input fields labeled "From:" and "To:". The "From:" field contains "01:00" and the "To:" field contains "03:00". To the right of the "To:" field is the text "(hh:mm)".

- **Never** - The event is never triggered.

### When Triggered

The actions to take when trigger conditions are met are configured here.

The image shows a configuration window titled "Trigger Actions". It contains several sections. At the top, there is a "Streams:" label followed by a dropdown menu showing "1". Below this, there are four checked checkboxes: "Email", "FTP", "Record", and "Trigger DO". Each checked checkbox has a sub-section. For "Email", there are "Subject:" and "Additional Information:" labels followed by text input fields. For "FTP", "Record", and "Trigger DO", there are "Snapshot" (selected with a radio button) and "Video" (unselected with a radio button) options. At the bottom, there is a "Trigger duration:" label followed by a dropdown menu showing "5 sec".

The following options are available:

- **Streams** - Selects the stream from which the snapshot or recording will be obtained.
- **Email** - E-mails notifications to the email address specified in the [Event Server](#) settings. If this option is chosen, fill in the following:
  - **Subject** - The subject line of the notification e-mail.
  - **Additional Information** - Contents of the notification e-mail.
  - **Snapshot/Video Clip** - Choose to send a snapshot or video attachment from 5s before to 30s after the trigger.

- **FTP** - uploads a snapshot or video clip to a FTP location specified in the [Event Server](#) settings.
  - **Snapshot/Video Clip** - Choose to upload a snapshot or video file from 5 seconds before to 30 seconds after the trigger. Files are sent as attachments.
- **Record** - Records video to the server specified in the [Event Server](#) settings and the microSD card when triggered. The video clip stored on both remote storage server and local storage is a video file 35 seconds in length (5 seconds before and 30 seconds after the trigger)
- **Trigger DO** -A Digital output signal is sent when triggered.
  - **Trigger Duration** - The length of time that the DO signal is sent. Options are 1, 2, 5, 10, 20 or 30 seconds. For more information please refer to the section on [DI & DO](#).

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## System

The system settings, which deal with hardware and firmware parameters, logs, and configuration lists, can be found under **Settings > System**.

### Storage Management

Live View | Settings | Logout | Help admin 2014-07-21 15:40:49

System > Storage Management

**Storage Status**

Storage Devices	Status	Total Size	Free	Used	Use(%)
micro SD Card	no	0M	0M	0M	0.00
ISCSI	no	0M	0M	0M	0.00
NAS	no	0M	0M	0M	0.00

Password:

**Storage Management**

Available Recording Time: 0 min

Storage Recycle Settings: ☒ On ☐ Off

☒ Max. Duration for Automatic Disk Save "1" Hours.

Max. Duration for Automatic Disk Cleanup "1" Hours, When The Disk Is Full.

MicroSD class 2/4/6 cards can be accessed for offline video storage and upgrade purposes. MicroSD installed in the camera can be managed under **System > Storage Management**.

### Storage Status

The status of the current microSD card can be obtained under *Basic Settings*:

- **Storage Devices** - -micro SD Card, ISCSI, NAS
- **Status** - If a readable card is present, this will show *ready*, otherwise *no* will be shown.
- **Total Size** - The size of the card.
- **Free** - The total space left on the card.
- **Used** - The occupied space on the card.
- **Use(%)** - The percentage of the card that has been used.
- **Format** - User may need to type in the administrator password to format the storage device.

## Storage Management

- **Available Recording Time** - Calculates how much recording time is available based on current settings.
- **Storage Recycle Settings** - Turning the function On will clear the microSD card once it is full.
- **Max Duration for Automatic Disc save \_\_\_ Hours** -  
If storage recycling is activated, the card will save recordings continuously. (99999 hours max.)
- **Max Duration for Automatic Disc cleanup \_\_\_ days** - If storage recycling is activated, the card will be cleared when this number of days has elapsed. (100 days max. Locked files will not be cleared)

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## System Status

The screenshot shows a web interface with a top navigation bar containing 'Live View', 'Settings', 'Logout', and 'Help'. The user is logged in as 'admin' on '2014-05-15' at '14:44:04'. A left sidebar lists menu items: 'General', 'Network', 'Video & Audio', 'PTZ', 'Recording', 'Event Notification', and 'System'. The 'System' menu is expanded, showing 'microSD Card Management', 'System Status' (highlighted), 'System Log', 'Firmware Upgrade', 'Reset To Factory Default', and 'Export/Import & Reboot'. The main content area is titled 'System > System Status' and contains a 'System Status' section with the following information:

IP Address:	172.30.10.109
MAC Address:	00:D0:23:60:93:CF
Subnet Mask:	255.255.255.0
Default Router:	255.255.255.127
microSD Card Capacity Status:	0MB
Boot Loader:	V1.0.A01
Firmware Version:	V2.4.C03

Below this information, there is a text label 'Send system status to technical support.' and an 'Email' button.

The camera status can be found under **System > System Status**.

This section displays useful system information including:

- **IP Address**
- **MAC Address**
- **Subnet Mask**
- **Default Router address**
- **microSD Card Capacity Status**
- **Boot Loader Version**
- **Firmware Version**

Clicking on the **Email** button will send the system status information out to the notification e-mail address specified in [Event Server](#) for troubleshooting or reference purposes.

## System Log

The system log, **System > System Log**, provides a log for system messages and events. The log lists important information such as login information, changes to camera settings (both successful and unsuccessful), triggered events, and error messages.

This information can be very useful in the event of a camera failure or unauthorized entry.

Clicking **Email** will send the log out as an email the notification e-mail address specified in [Event Server](#); Clicking **Download** will begin the browser download process to download the log to the local PC.

## Firmware Upgrade

Upgrading with a firmware file on a PC:

1. Power ON the device.
2. Connect to the camera through a web browser and go to **System > Firmware Upgrade**.

3. Click “Browse” and locate the file [cam number]fw.

## Configuration Upgrade

- **Keep customized configuration** to keep current configuration settings.
- **Keep Network Setting** to keep current network configuration.
- **Upgrade all configurations** to clear all settings back to factory defaults.

Click **Upgrade** to start the upgrade. Upon completion of firmware upgrade, the camera will reboot (you will be logged off).

The LED will flash amber during the firmware upgrading. The camera will start reboot after firmware upgrade completed. When the LED indicator turns green, the firmware is upgraded successfully.

If the status LED shows steady amber for over 1 minute, the camera will become unresponsive and the upgrade process may have failed. Please contact with your dealer for technical support.

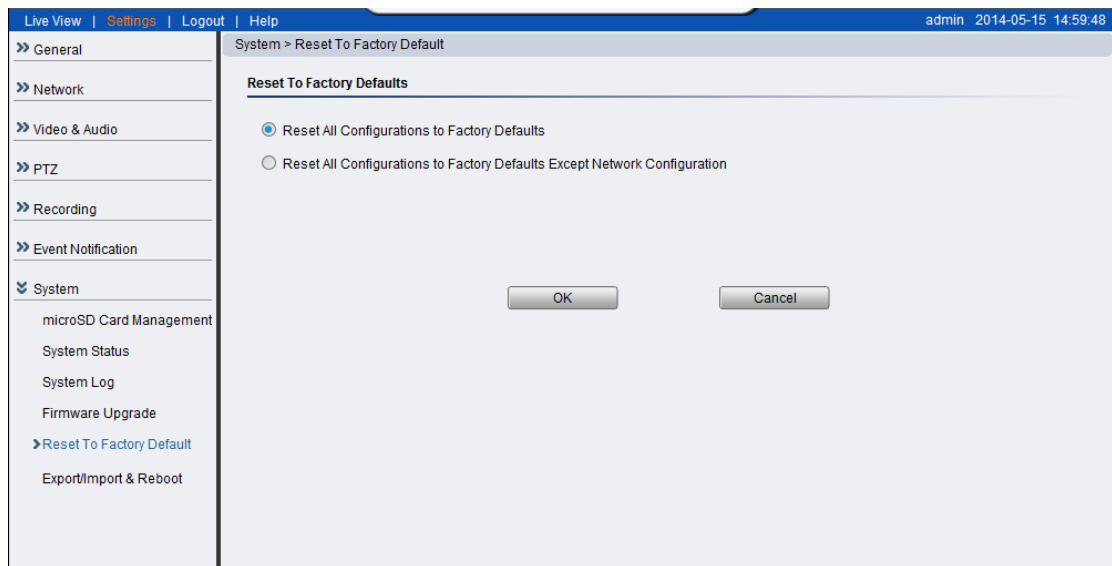

## Reset to Factory Default

To reset the device to the factory default settings:

1. Make sure the device is in operation mode.
2. Using a needle or similar object to press and hold the Reset button until the camera restarts (about 2 seconds). The status LED will change to amber during startup.
3. When the Status Indicator changes to back to Green (which may take up to 1 minute), the process is complete. The default IP address is 192.168.88.10 if not assigned by a DHCP server.

**Note:** Resetting to the factory default settings using the Reset button will cause all parameters (including the IP address) to be reset. To reset the unit without changing parameters, disconnect and reconnect the power connector.

Camera resets can also be performed under **System > Reset To Factory Default**.

There are 2 types of reset.

- Reset All Configurations to Factory Defaults
- Reset All Configurations to Factory Defaults Except Network Configuration.

Click **OK** after choosing a reset option to perform a reset.

Alternately, you may press the “Reset” button on the bottom of the camera to perform a complete reset of the camera (no configurations retained). To reset the camera by pressing the “Reset” button on the bottom of the camera, press and hold the “Reset” button for 3 seconds. During this time, the LED indicator in front of the camera will blink in red.

## Export/Import & Reboot

In certain situations it may be necessary to restart your network camera (network settings changed, DHCP added, etc). The settings under **System > Export/Import & Reboot** allow you to restart the camera.

System > Export/Import & Reboot

Export/Import & Reboot

Restart Camera:

Export Configuration:

Export Log:

Import Configuration:

This menu also contains options to export configuration details (for backup or replication purposes), as well as import configuration details. The following options are available:

- **Restart Camera** - Resets the camera when **Apply** is clicked.
- **Export Configuration** - Export the camera's settings and configurations by clicking **Export**, this will start a browser dialogue to download the configuration.
- **Export Log**
- **Import Configuration** - Imports previously exported camera settings. The field should contain the path for the camera configuration file. Click **Browse**: to browse your PC for the configuration file. Click **Apply** to import the settings.

# Chapter 5. Configuration through the IP Utility

Camera configurations can be done through web interface and IP Utility.

\*\*For IP Utility, please look into [this chapter](#); for web interface, please refer to [Chapter 4](#).

		Web Interface	IP Utility
General	Basic Settings	V	X
	User Account	V	X

## 5.1. Overview

The IP Utility is a set of tools for network cameras. It includes tools to create, modify, delete and manage groups within the camera; The IP Camera Utility also provides tools to perform simple connectivity configuration, firmware upgrades and reboot operations. The utility is intended to simplify the configuration and management of multiple cameras.

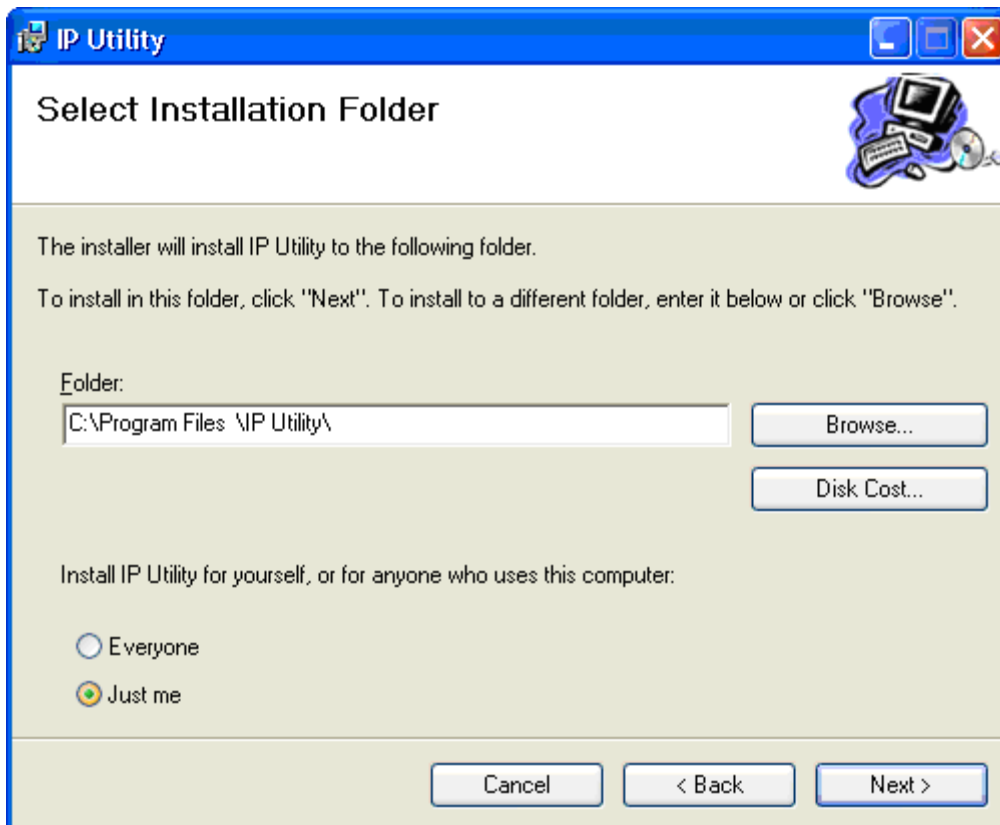

## 5.2. Installing the IP Utility

Install the IP Utility with the following steps:

1. Start SearchToolInstall.exe to begin the utility installation dialog:

2. Click **Next** to continue with installation.

3. Fill in the **Folder** field to specify the installation path. Clicking **Browse...** pulls up a file system browser. Clicking **Disk Cost** will display free space and the space the utility will take up on disks.
4. Choose if you wish to install the application for the current user only (**Just me**) or all users on this computer (**Everyone**).
5. Click **Next** to continue. The system will respond with a ready screen. Click **Next** again. The system will respond by displaying installation progress.
6. You may click **Cancel** at any time before finishing introduction, or **<Back** if it is available to cancel or jump back a step. Click **Close** when after installation is complete. The software is ready to use at this point.

## 5.3. IP Utility Basics

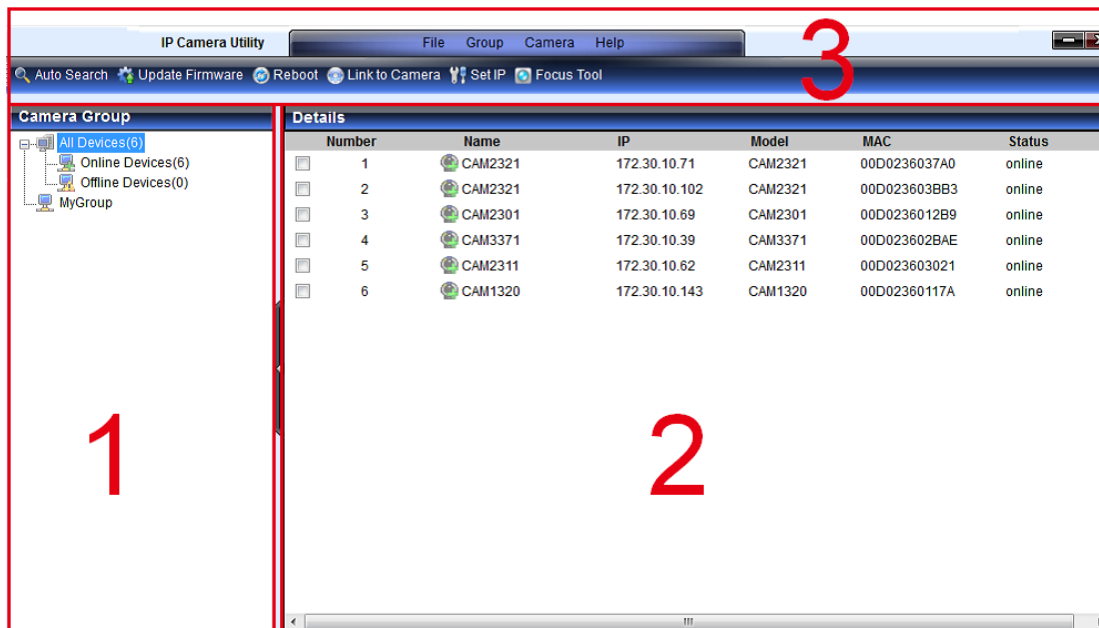

### Starting the IP Utility

To start the IP Utility, double-click the **IP Utility** shortcut on your desktop or go to **Start > Program Files > IP Utility> IP Utility**.

**Note:** On startup, the utility will automatically scan for IP Cameras on the same subnet as the computer. In some cases this may result in longer wait times.

### IP Utility Main Screen

The IP Utility main screen is divided into 3 sections:

1. **Camera Group Display** - displays group details
2. **Camera Detail Display** - displays camera details
3. **Function Buttons and Menus** - this section contains alternative access methods for functions that can be done within the Camera Group and Camera Detail Displays. This manual does not discuss this section separately.

## Exiting the IP Utility

To exit the IP utility, click the X button on the top right corner of the screen or choose **File > Exit** from the menu bar.

## 5.4. Camera Actions

This section displays camera information, including the IP, Name, Model, MAC Address, Status and Network Mask.

### Search

Search updates the details for the cameras listed, as well as locates any new cameras connected on the same subnet. The search is performed every time the IP utility starts. To perform search again:

1. Click the **Auto Search** button or click **Camera > Search** in the menus. The search will begin, and a status bar will display the search progress.

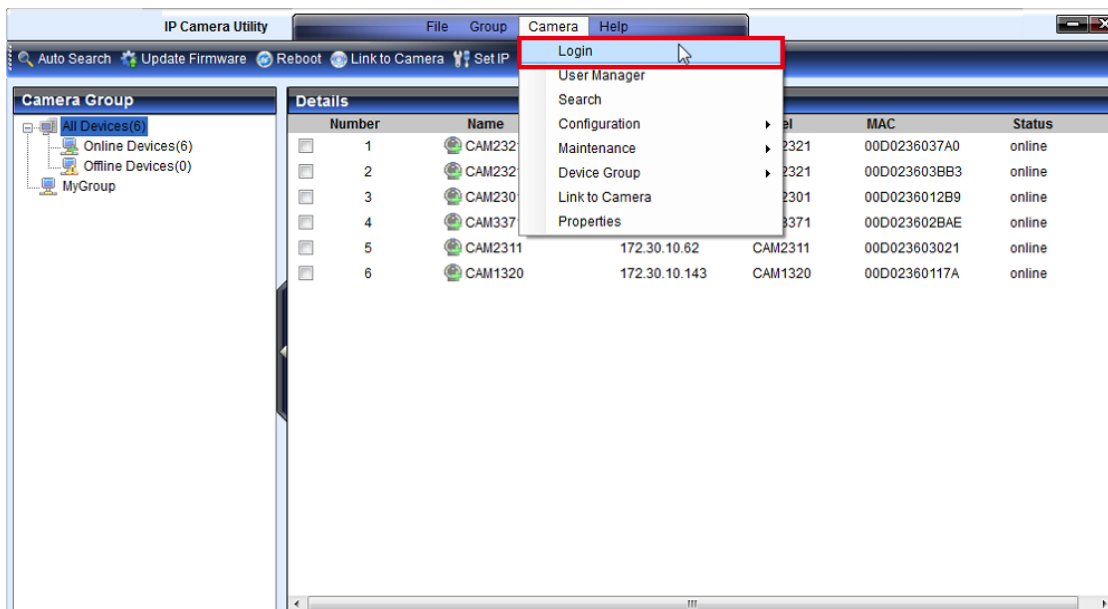

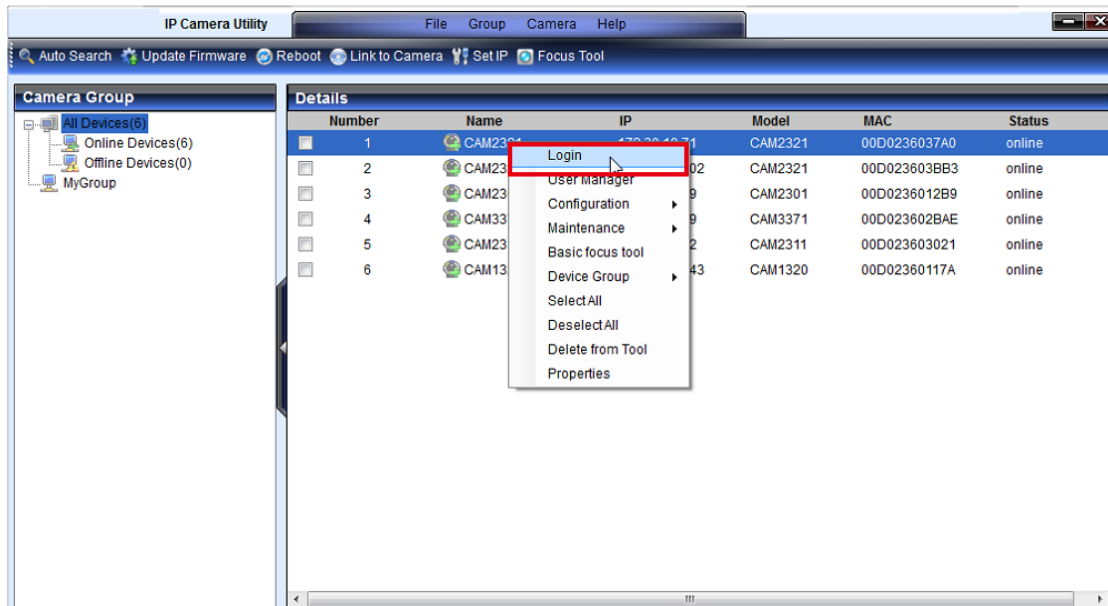

**Note:** The search may take up to 2 minutes, depending on your network configuration.

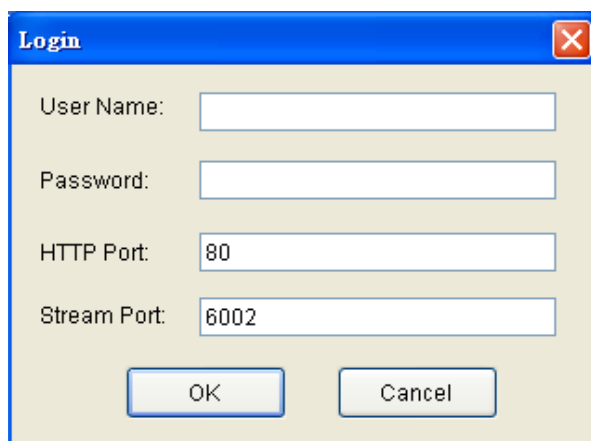

## Login

Before performing camera actions, most cameras require that proper login credentials are supplied. To login to a camera:

1. Right click the camera you wish to set. Select **Login** from the popup, the system responds with the *Login* window. Alternatively, click the camera entry and choose **Login** from the **Camera** menu.

2. Fill in the user name and password.

A screenshot of a 'Login' dialog box. The dialog has a blue title bar with the word 'Login' and a red close button. The main area is light beige. It contains four input fields: 'User Name:' (empty), 'Password:' (empty), 'HTTP Port:' (containing '80'), and 'Stream Port:' (containing '6002'). At the bottom are two buttons: 'OK' and 'Cancel'.

3. Click **OK** to set the username and password.

**Note:** To perform further configuration, please make sure that the User set here has administrator privileges. The default Username/Password for cameras is admin/admin.

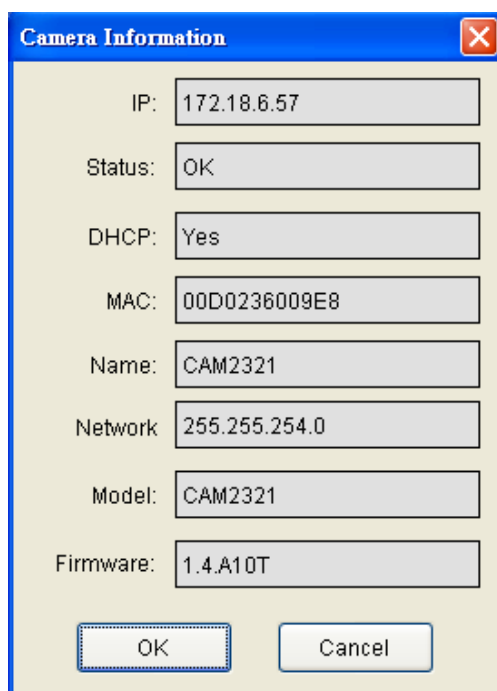

## Properties

The properties of a camera can be viewed by following these steps:

1. Select a camera by checking the box in the first column of its listing.
2. Right click the camera and select **Properties**, or select **Camera > Properties** from the menu bar.

The *Camera Information* popup will display with camera details.

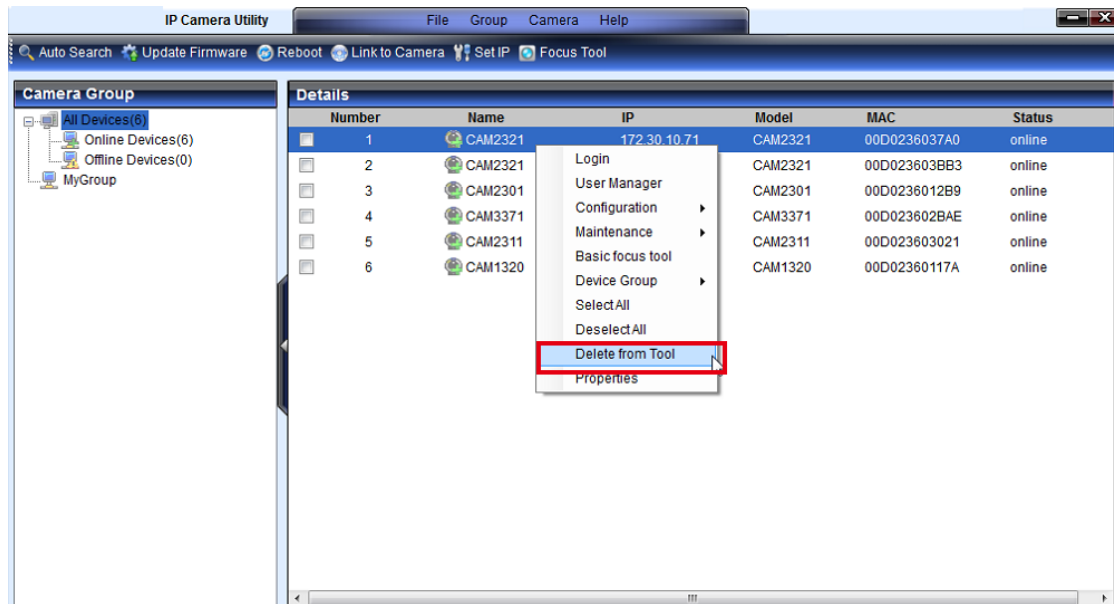

A screenshot of a 'Camera Information' popup window. The window has a blue title bar with the text 'Camera Information' and a red close button. The main area is light yellow and contains several labels with corresponding text boxes: IP (172.18.6.57), Status (OK), DHCP (Yes), MAC (00D0236009E8), Name (CAM2321), Network (255.255.254.0), Model (CAM2321), and Firmware (1.4.A10T). At the bottom are 'OK' and 'Cancel' buttons.

Field	Value
IP:	172.18.6.57
Status:	OK
DHCP:	Yes
MAC:	00D0236009E8
Name:	CAM2321
Network:	255.255.254.0
Model:	CAM2321
Firmware:	1.4.A10T

## Delete from Tool

1. Select one or more cameras by checking the box in the first column of their listing.
2. Right click the camera(s) which you want to delete from the tool and select **Delete from Tool**. The camera will be removed from the listings.

## Select All

In a group context, right clicking a camera, and selecting **Select All** will select all the cameras in the group.

## Reboot Camera

In certain cases it may be necessary to reboot the camera. To do this:

1. Select a camera by checking the box in the first column of its listing.
2. Click the **Reboot** button or select **Camera > Configuration > Reboot** from the menu bar.

The camera will reboot. If further configuration is needed, perform the **Login** function again after the reboot is completed.

## Set IP

The IP Address of a camera can be set by following these steps:

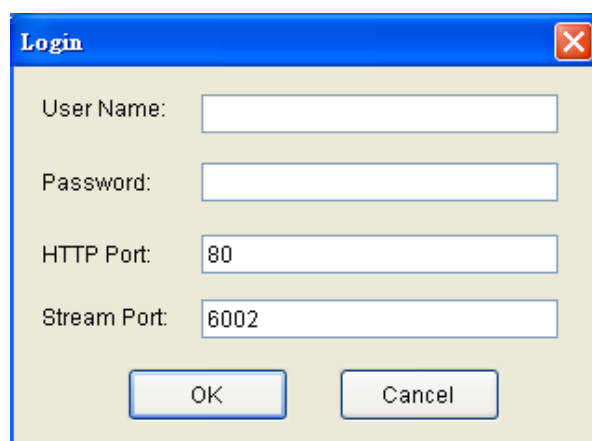

1. Click the **Set IP** button.

2. You can choose to obtain an IP address from DHCP or assign a fixed IP.

3. Select one or more cameras by checking the box in the first column of their listing. Click **Select All**.
4. A *Login* window will pop up. Fill in the user name and password. Click **OK**.

A Windows-style dialog box titled "Login" with a blue header bar and a red close button in the top right corner. The dialog has a light beige background. It contains four labeled text input fields: "User Name:" (empty), "Password:" (empty), "HTTP Port:" (containing "80"), and "Stream Port:" (containing "6002"). At the bottom, there are two buttons: "OK" and "Cancel".

**Login**

User Name:

Password:

HTTP Port:

Stream Port:

Click **OK** to save or **Cancel** to abort the changes before you leave the page.

## Link to Camera Web Interface

### Link to Camera

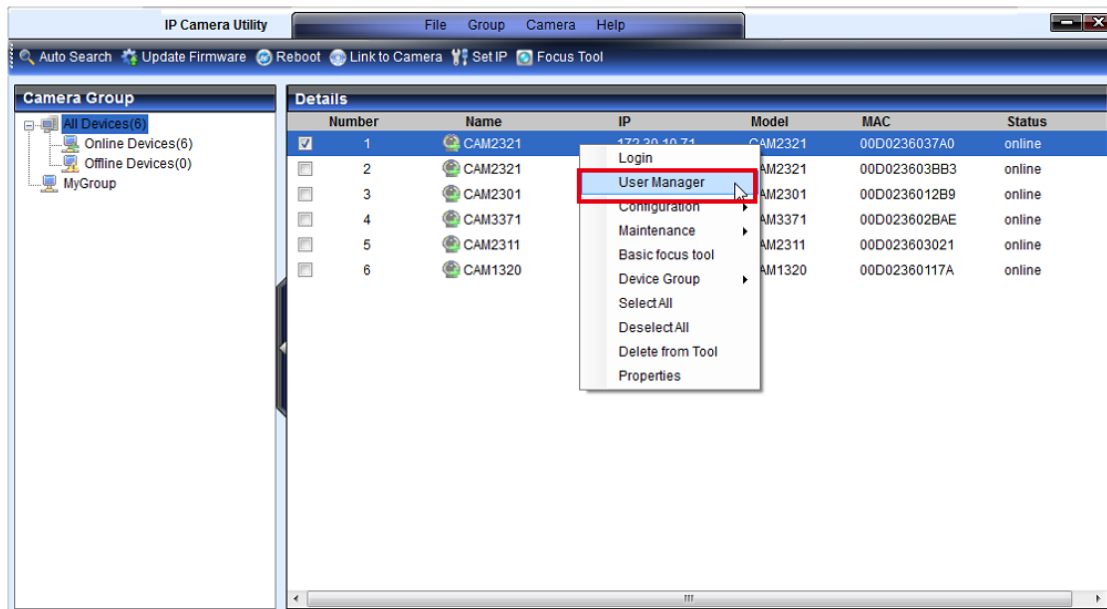

1. Select a camera by checking the box in the first column of its listing.
2. Double click the selected camera or select **Camera > Link to Camera** in the menu bar. The camera's live view webpage will open in a browser window.

## Link to Camera User Manager

This function links to the user management page of the selected camera.

1. Select a camera by checking the box in the first column of its listing.
2. Right click the camera and select **User Manager** or click **Camera > User Manager** in the menu bar. The camera's user management webpage will open in a browser window.

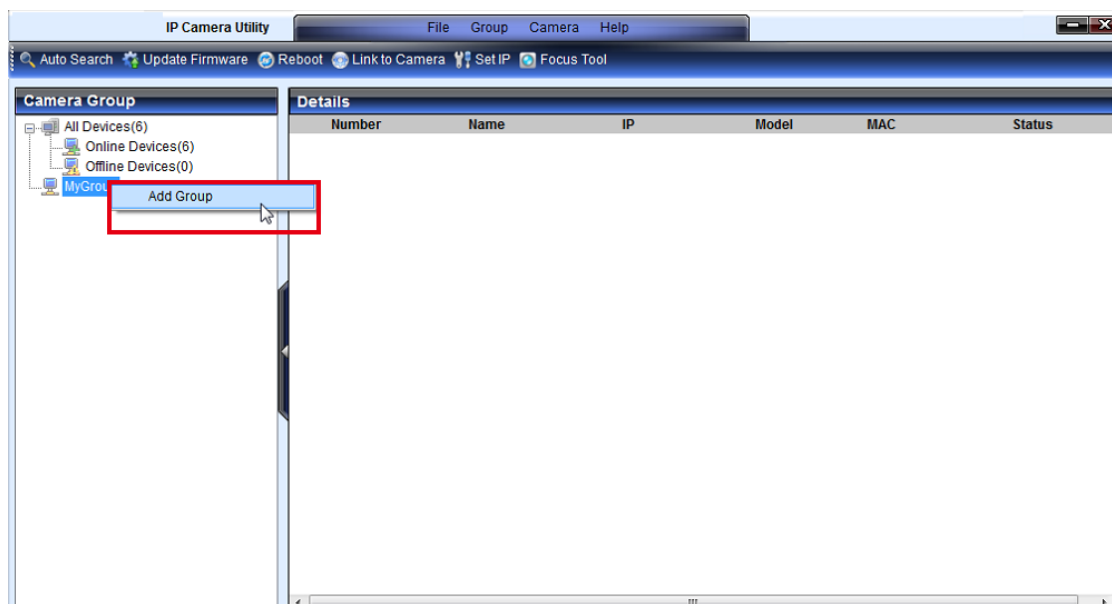

## 5.5. Camera Group Actions

The *Camera Group* frame contains a simple tree containing group listings. There are two pre-defined subsections.

- **All Devices** - contains all the cameras in the tool, as well as predefined groups *New Devices* and *Warnings/Errors*
- **MyGroup** - contains only user defined groups.

### Add Group

1. Right click the *MyGroup* root, and choose **Add Group** or choose **Add Group** from the **Group** menu.

The system responds with the *Add Group* popup.

2. In the *New Group Name* field, type in a group name.

3. Click **OK** to add the group. The group will appear under *MyGroup*

**Note:** Camera group names can contain upper and lower-case letters, numerals and the \_ symbol. Cameras can belong to more than one group.

## Delete Group

1. Expand *MyGroup* and right-click the group you wish to delete.
2. Choose **Delete Group** to delete the group. Alternatively, click the group and choose **Delete Group** from the **Group** menu.

3. The system will ask to confirm the deletion. Click **Yes** to delete the group.

**Note:** Groups may be deleted, even if they contain cameras.

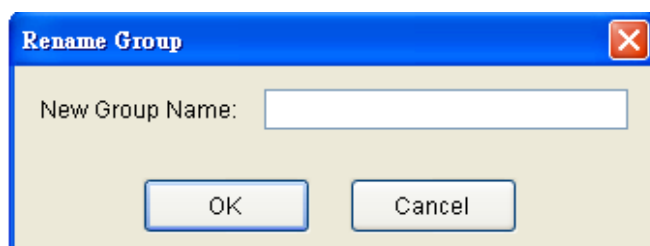

## Rename Group

1. Expand *MyGroup* and right-click the group you wish to rename.
2. Choose **Rename Group**. Alternatively, click the group and choose **Rename Group** from the **Group** menu.

The *Rename Group* popup appears.

3. Enter a new group name in the *New Group Name* field.

A screenshot of a 'Rename Group' dialog box. The dialog has a blue title bar with the text 'Rename Group' and a red close button. The main area is light beige and contains a label 'New Group Name:' followed by a white text input field. At the bottom, there are two buttons: 'OK' and 'Cancel'.

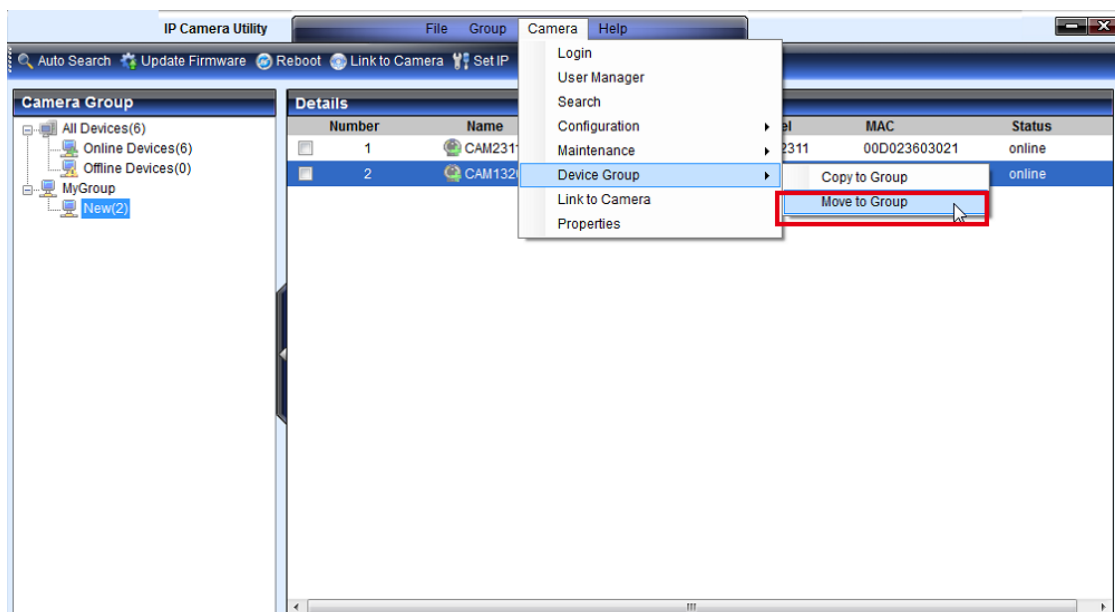

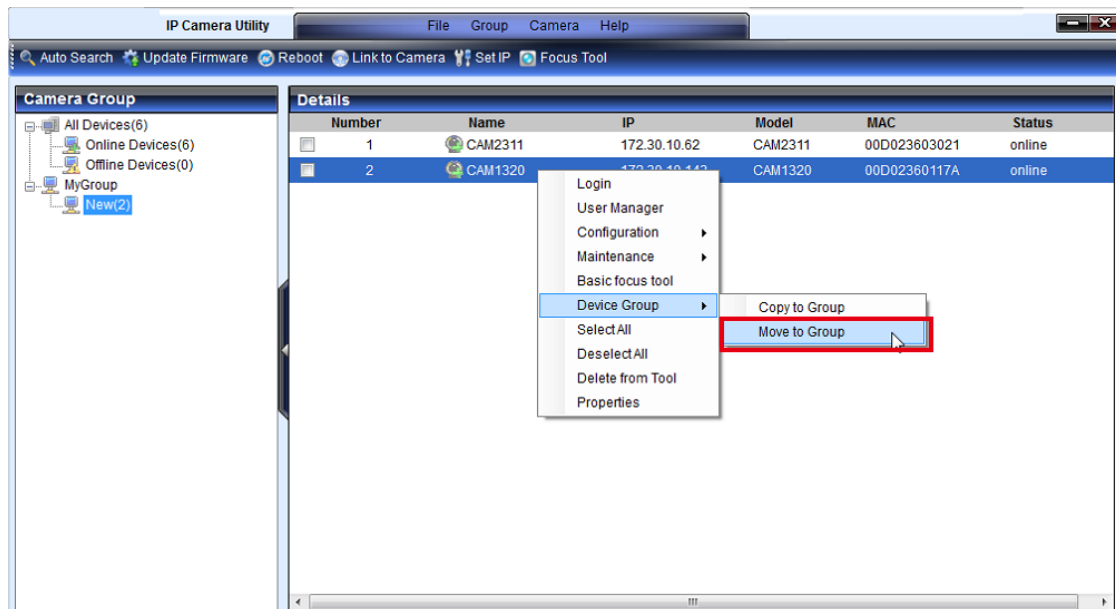

4. Click **OK** to save your changes.

**Note:** Camera group names can contain upper and lower-case letters, numerals and the \_ symbol.

## Move to Group

This function moves the selected camera(s) from a group to another group.

1. From the *Camera Group* window select a group under *MyGroup*.
2. Select one or more cameras from the existing group by checking the box in the first column of their listing.
3. Right click the camera and select **Device Group > Move to Group**, or select **Camera > Device Group > Move to Group** from the menu bar.

4. In the *Select Group* pop-up box select the destination group.

5. Click **OK** to move the selected camera(s) to the group.

**Note:** Cameras can not be moved from groups under *All Devices*.

## Copy to Group

This function copies the selected camera(s) from a group to another group.

1. From the *Device Group* window select a group.
2. Select one or more cameras from the existing group by checking the box in the first column of their listing.
3. Right-click the camera(s) and select **Device Group > Copy to Group**, or select **Camera > Device Group > Copy to Group** from the menu bar.

4. In the *Select Group* pop-up box select the destination group.

5. Click **OK** to copy the selected camera(s) to the group.

## 5.6. Configuration Settings

Configuration can be downloaded and updated by selecting **Camera > Configuration**, or the process can be automated by downloading the configuration from one camera using the **Download Configuration** function, and then using the **Update Configuration** function to upload the changed configuration file.

## Download Configuration

This function downloads a configuration file.

1. Select a camera by checking the box in the first column of its listing.
2. Right-click the camera which you want to download from and select **Configuration > Download Configuration**, or select **Camera > Configuration > Download Configuration** from the menu bar. The *Download Configuration* popup will display.

3. Click the **Browse** button to browse the computer and locate a destination.
4. Click **Download** to download the configuration file to the destination.

## Update Configuration

1. Select one or more cameras by checking the box in the first column of their listing.
2. Right-click the camera(s) which you want to update to and select **Configuration > Update Configuration**, or select **Camera > Configuration > Update Configuration** from the menu bar. The *Update Configuration* popup will display.

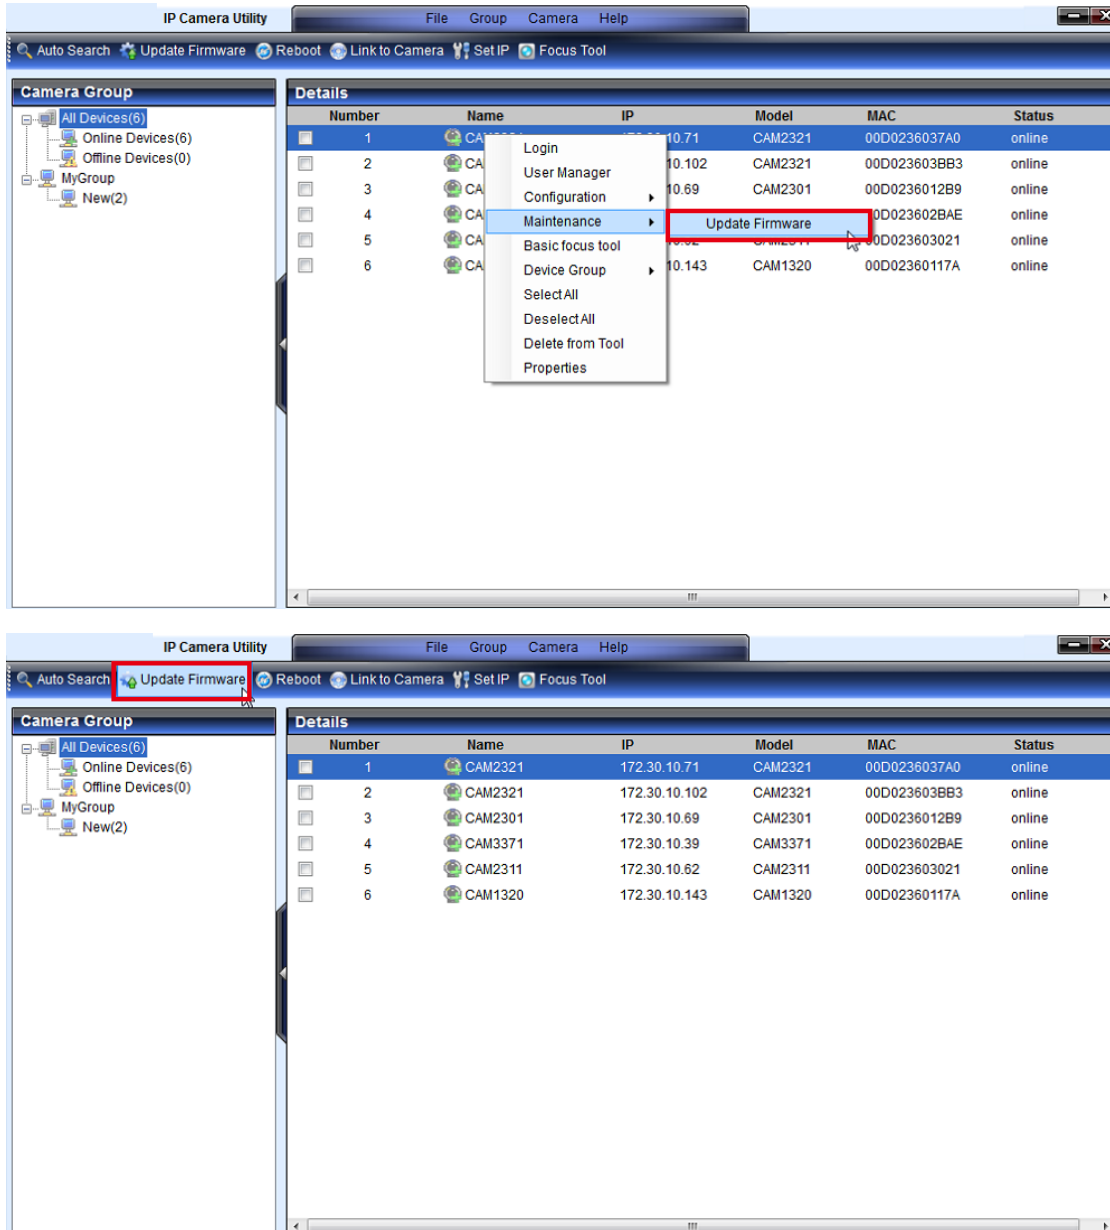

3. Click the **Browse** button to browse the computer and locate a configuration file.
4. Click **Update** to upload the configuration file to the camera(s).

## 5.7. Firmware Actions

### Update Firmware

Once a new version of the camera firmware is obtained, the firmware can be updated using the following steps:

**Note:** You must be logged into the camera to update the camera firmware.

1. Select one or more cameras by checking the box in the first column of their listing.
2. Click the **Update Firmware** button; right-click the camera(s) which you want to update to and select **Maintenance > Update Firmware**; or select **Camera > Maintenance > Update Firmware** from the menu bar. The *Update Firmware* popup will display.

3. Click the **Browse** button to browse the file system and locate a firmware file.
4. Click **Update** to upload the firmware to the camera(s).

## 5.8. Focus Tool

The Focus Tool is used as a reference for focus precision. Click the **Focus Tool** button to open it.

Information of *Best Focus Value*, *Current Focus Value* and *Focus Percent* will be shown at the bottom of the Focus Tool Window. You can click **Refresh** to get a new data after focus adjustment is done.

**Note:** When the Focus Percent is higher, the focus is more precise.
